**Summary**

**Week 46**
30 suspected cases reported

This level of reporting is BELOW the historical average.\(^2\)

**Week 45**
23 suspected cases reported

2 (8.7%) confirmed in the laboratory\(^3\)

2 (3%) municipios** had confirmed cases

**Serotypes**

In the last 8 weeks:
- 80% DENV-2
- 20% DENV-4
- 0% DENV-3
- 0% DENV-1

**Accumulated in 2015**

1696 suspected cases reported

43 (3%) confirmed in the laboratory\(^3\)

0 confirmed cases of dengue hemorrhagic fever (DHF)

0 confirmed fatal cases pending review

---

\(^1\)The numbers reported in the Summary reflect all data from regular and enhanced surveillance.

\(^2\)The historical average represents the years 1986 - 2014. The threshold level is the 75th percentile of the distribution of cases in the same years. Data from the areas involved in an enhanced surveillance project are not included*. For this reason, the total number of reported cases in the figure may differ from the number reported in the Summary.

\(^3\)In this report laboratory confirmation refers to a positive IgM or PCR test.

*Reported cases from the municipios of Arroyo, Guayama, Maunabo, Patillas, and Salinas may be higher due to their involvement in an enhanced surveillance project.

**Municipios are administrative units roughly equivalent to counties.
Municipios with laboratory confirmed cases in the weeks 42-45

Confirmations of virus serotype in the last eight weeks by municipio

Dengue 1

Dengue 2

Dengue 3

Dengue 4

Total viral identifications in the last 12 months

The percentage is the proportion of reported cases with confirmation of serotype.
