

Web Maps & Web Apps

Learning objectives

- Consider extending mapmaking to the online space
- Discuss types of basic web application
- Create an ArcGIS Dashboard

Basic anatomy of a map

Title

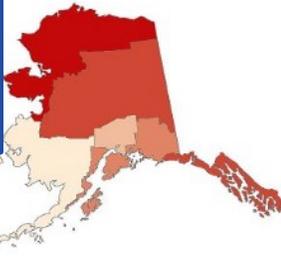

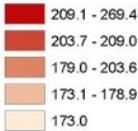

Heart Disease Death Rates in Alaska by Gender & Public Health Region, 2008-2012

per 100,000 Residents

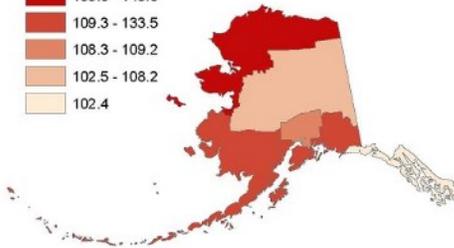

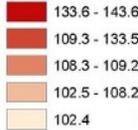

Map Key(s)

per 100,000 Men

per 100,000 Women

Metadata

Author: MJ Danison
All rates are age-adjusted to the 2000 US Standard Population
Source: CDC/National Center for Health Statistics National Mortality Database accessed with SEER*Stat statistical software, HRSA Data Warehouse

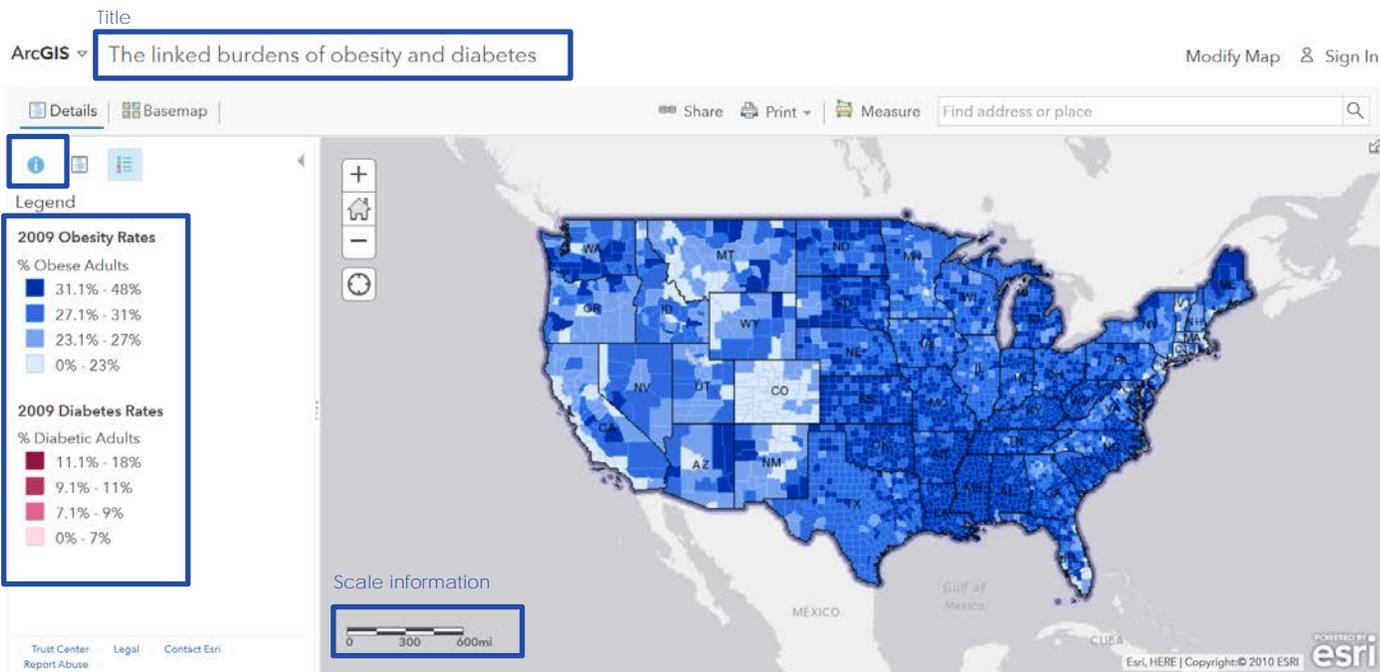

Scale information

Understanding how to read a map allows you to capture the information it presents: what works well and what does not...

Keep in mind visual hierarchy – most important information should be easy to identify

The linked burdens of obesity and diabetes

Fact 1: Close to a third of U.S. adults are obese. Fact 2: Almost 90% of people with newly-diagnosed type 2 diabetes are overweight. County maps reflect the close links between these key public health challenges.

Find the balance between generalizing and showing details. With interactive changes in scale, web maps can show more of both.

Adding context with StoryMaps

[Click here to view an example of a Story Map](#)

Online maps are a useful communication tool

A map without context can be hard to read

There are challenges with using a single map to tell a story

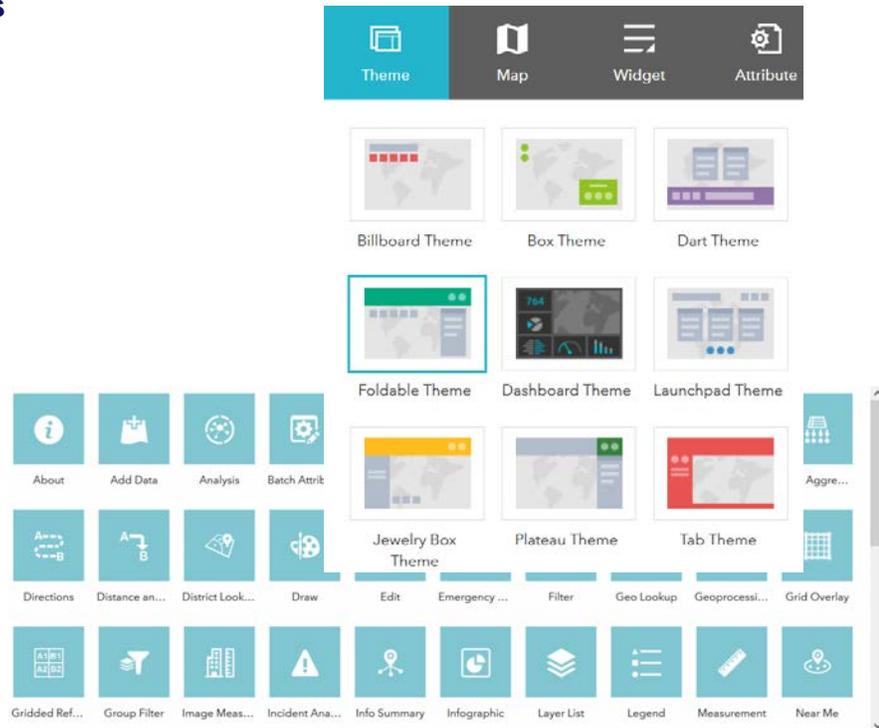

Story Map is a multi-media map aimed at storytelling

One of many Configurable App Templates (<https://doc.arcgis.com/en/arcgis-online/create-maps/choose-configurable-app.htm>)

Customize with Web AppBuilder

• Instead of a template, customize with themes and widgets

- Layer list
- Filter
- Swipe
- Summary
- Time Slider

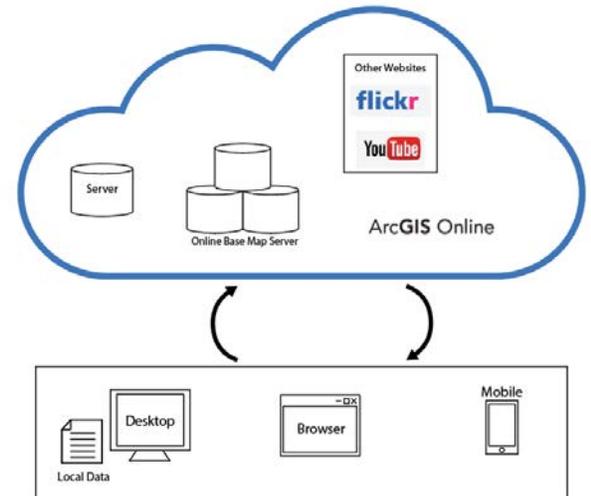

Available with Organization subscription

Customize with HTML/JavaScript through Web AppBuilder for ArcGIS (Developer Edition)

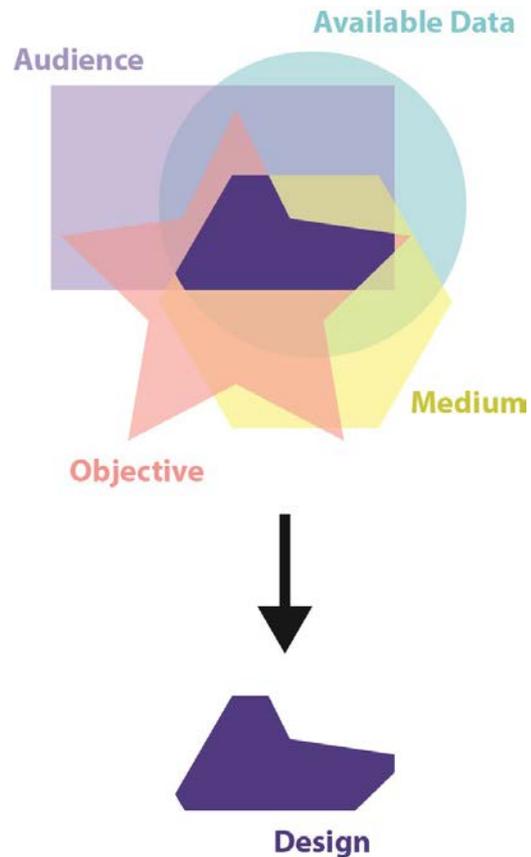

Extending mapmaking

- Update data of existing maps to display recent or current status
- Use permissions to control who can or cannot access the map
- Consider display on screens of all sizes (phones, tablets, etc.)

Map design process

- Design is shaped by multiple factors
- This process is a means of coordinating all elements of your map work to effectively convey information
- Goal is to help the map reader make proper use of the map to capture the message(s)

Map objectives: GIS processes end with the communication of results

The Map design process helps to ensure that our maps say what we want them to...

Let's use the elements of: Objective(s); Audience; and Medium to critically review a series of maps now...
