

Compare Layers

- Title
 - Video Tutorial for the Interactive Atlas of Heart Disease and Stroke
 - How to explore data using the Compare Layers tool
 - <https://nccd.cdc.gov/DHDSPAtlas/>
- Transcript

The Compare Layers tool allows users to compare risk factors, social and economic data, or health services with heart disease or stroke data. Prior to launching the tool, create a map by selecting the map area, data and filters in the left navigation bar. You can also watch the video tutorial 'How to Create a Map'. Once the desired map has been created, move the cursor to the top navigation panel and select the 'Compare Layers' tool. Move the cursor to the dialog box. Using the 'Select Class' menu, choose the data layer that you would like to compare. The 'Select Sub Class' and 'Select Theme' menus will now be available. If desired, change the values or use the default selections. Once all selections have been made, move the cursor to the green 'Apply to Swipe' button and click. A vertical scrollbar will now appear over the map. Move the cursor left until the bar is reached. Click and drag the scrollbar right to reveal the selected data. Close the dialog or select the 'Compare Layers' tool again to close the tool. This concludes the video tutorial for exploring data using the compare layers tool.
