Maps Over Time

- Title
  - Video Tutorial for the Interactive Atlas of Heart Disease and Stroke
  - How to view temporal trends in heart disease and stroke maps using the Maps Over Time tool
  - https://nccd.cdc.gov/DHDSPAtlas/
- Transcript
  - The Maps Over Time tool allows the user to play an animation of heart disease or stoke maps over time. First, create a map displaying heart disease or stroke hospitalization or mortality data. Once the desired map has been created, move the cursor to the top navigation panel and select the Maps Over Time tool. A new dialog box will appear. Move the cursor to the dialog. Navigate to the Speed dropdown and select the desired speed for the animation in seconds per map. Once a speed has been selected, move the cursor to the play button and start the animation. The animation will continue to loop through all available years until the pause button is selected or the tool is closed. This concludes the video tutorial for the Maps Over Time tool.
