

A future without type 2 diabetes—can you see it?

You can prevent or delay type 2 diabetes if you*

- Lose 5 to 7 percent of the weight, if overweight—that's 10 to 14 pounds (4.5 to 6.3 kg) for a 200-pound (90.6 kg) person.
- Lose and maintain the weight loss by making healthy food choices by eating a variety of foods that are low in fat and reducing the number of calories eaten per day. -
- Get at least 30 minutes of moderate-intensity physical activity five days a week. This could be brisk walking, yard work, and actively playing with children, for example, riding bicycles or playing soccer.

*A message from the Diabetes Prevention Program study.

August 2008
The U.S. Department of Health and Human Services' National Diabetes Education Program (NDEP) is jointly sponsored by the National Institutes of Health (NIH) and the Centers for Disease Control and Prevention (CDC) with the support of more than 200 partner organizations.

Type 2 diabetes does

NOT

have to be your destiny
