

HOW DOES ELECTRONIC CASE REPORTING (eCR) WORK?

Patient is diagnosed with a reportable condition, such as COVID-19

Healthcare provider enters patient's information into the electronic health record (EHR)

Data in the EHR automatically triggers a case report that is validated and sent to the appropriate public health agency if it meets reportability criteria

The public health agency receives the case report in real time and a response about reportability is sent back to the provider

State or local health department reaches out to patient for contact tracing, services, or other public health action
