

## Vaccinations among Health Care Personnel

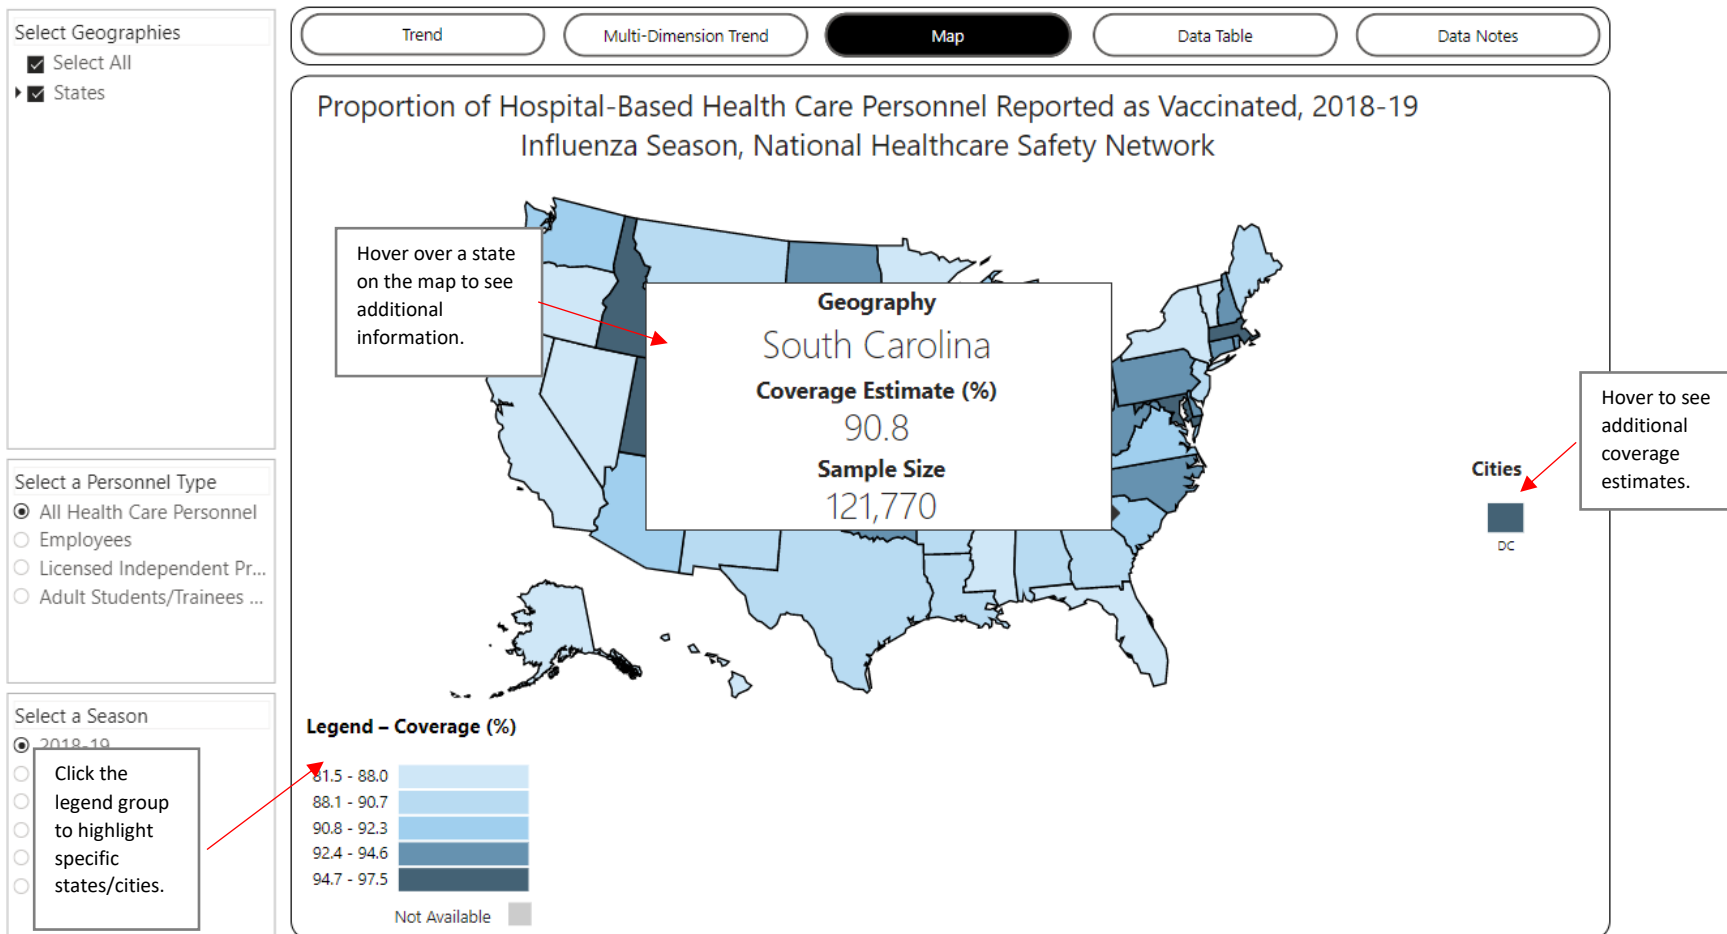

The Trend tab shows influenza vaccination coverage trends across multiple geographies over time. Select one or more Geographies, one Personnel Type and one or more Seasons to view coverage estimates.

The Multi-Dimension Trend tab shows influenza vaccination coverage trends across multiple personnel types over time. Select one Geography, one or more Personnel Types and one or more Seasons to view coverage estimates.

The Map tab shows influenza vaccination coverage estimates across multiple geographies. Select one or more Geographies, one Personnel Type and one Season to view coverage estimates.

The Data Table tab shows influenza vaccination data in a table format. Upon arriving on this tab, the table will be blank. Make selections using the dropdown filters on the left. Select one or more Geographies, and Personnel Types and Seasons to view data.

The screenshot shows the 'Data Table' tab selected in the top navigation bar. On the left, there are three filter sections: 'Select Geographies' with options for National and States; 'Select Personnel Types' with options for All Health Care Personnel, Employees, Licensed Independent Practitioners, and Adult Students/Trainees; and 'Select Seasons' with options from 2018-19 down to 2013-14. The table header includes columns for Season, Vaccine, Geography, Personnel Type, Coverage Estimate (%), and Sample Size. A red arrow points from a text box to the 'Season' header. The text box contains the instruction: 'Click a table header to sort the list by the specific topic.' The table area is currently blank, displaying the message: 'Please make selections at left to display data'.

The Data Notes tab provides information about the data, methodology, and contact information.

The screenshot shows the 'Data Notes' tab selected in the top navigation bar. The content area contains the following text:

- Data represent influenza vaccination performance measurement for hospital-based health care personnel from the National Healthcare Safety Network.
- Pooled proportions for each state are calculated as the number of health care personnel (HCP) vaccinated at their facility plus the number who provided documentation of vaccination elsewhere, divided by the total number of HCP in that group reported as working at the facilities from October 1 through March 31, and multiplied by 100. Personnel are reported by each facility in which they work; therefore, individuals may be counted more than once.
- All Healthcare Personnel represents the pooled proportion vaccinated among employees, licensed independent practitioners, and adult students/trainees and volunteers combined.
