

**Figure 5. Percent change in incidence\* of laboratory-confirmed *Salmonella* infections with the top *Salmonella* serotypes in 2010<sup>†</sup> compared with average annual incidence during 1996–1998, by serotype, FoodNet**

\*The estimates and confidence intervals presented indicate the relative change in the incidence of that pathogen compared with 1996–1998. The actual incidences of these infections cannot be determined from the graph.

<sup>†</sup>Data are preliminary. Percent change was not evaluated for serotypes 14,[5],12:i:- and Javiana.

<sup>§</sup>No significant change = 95% confidence interval is both above and below the no change line; significant increase = estimate and entire 95% confidence interval are above the no change line; significant decrease = estimate and entire 95% confidence interval are below the no change line
