

**International Collaboration on Enteric Disease 'Burden of Illness' Studies
9th Annual Meeting, March 13, 2012, Atlanta, Georgia, USA**

Dinner Discussion

- With respect to our goal of identifying gaps and working for concordance - what is our role after FERG (slated to complete its scaled down work by 2013)? Are there pieces there we should build on? Should we explicitly be working to address gaps identified in their work?
- What products do we want to generate for other groups?
- Should we consider a change in organizational structure? There's been a proposal for an operational lead and a technical lead going forward, a technical lead would work with the operational lead to generate the scientific agenda/direction of the Collaboration.
- Should we consider meeting face to face every other year rather than every year?
