

Table. Overall change* and 95% confidence interval in incidence of laboratory-confirmed bacterial and parasitic infections[†] in 2007-2009 compared with average annual incidence for 1997-1999 - Foodborne Diseases Active Surveillance Network (FoodNet), United States

Period of interest	1997-1999 comparison period % change* (95% CI)
2007-2009	20%↓ (11%↓ - 29%↓)

*Overall change reported as increase (↑) or as decrease (↓). This measure does not allow for assessment of changes in infections of individual pathogens.

[†]The pathogens included in the estimation of the overall change in incidence are: *Campylobacter*, *Cryptosporidium*, *Cyclospora*, *Listeria*, *Salmonella*, Shiga toxin-producing *Escherichia coli* (STEC) O157, *Shigella*, *Yersinia*, and *Vibrio*.
