Dr. Susan Allen, a Professor at Emory University, with her colleagues and field staff in Rwanda and Zambia, conducted the sentinel research that clearly documented the critical importance of couples HIV counseling and testing services. The counselors on these studies from the Rwanda-Zambia HIV Research Group (including Project San Francisco [PSF] in Kigali, Rwanda, and the Zambia-Emory HIV Research Project [ZEHRP] in Lusaka, Zambia) pioneered approaches to delivering HIV counseling and testing services to couples. Dr. Allen and her staff provided ongoing guidance and support throughout the conceptualization and consultation process of developing this curriculum. Dr. Allen's research has been supported by the US National Institutes of Health, including the Institutes of Allergy and Infectious Diseases, Mental Health, and Child Health and Development, as well as the International AIDS Vaccine Initiative (IAVI).

Dr. Rebecca Bunnell from the Global AIDS Program in Uganda provided technical content, guidance, and conceptual contributions to this curriculum based on her research and work in Uganda.

Dr. Connie Celum from the University of Washington, through a grant from the Gates Foundation, coordinated and provided resources to support two initial pilots of the curriculum materials: April 2004 in Johannesburg, South Africa, and May 2004 in Nairobi, Kenya. Counselors and staff from the Partners in Prevention study sites provided valuable feedback during these pilot tests.

Dr. Miriam Taegtmeier, Director of Liverpool VCT in Kenya, in December 2003 coordinated a one and a half day consultation of counselors from Liverpool VCT, PSF, and ZERPH to share their wealth of experience in providing services to couples and to provide input and feedback on the draft document. Dr. Alan Haworth, Director of the Ministry of Health Counseling Unit, Lusaka, Zambia, was a key contributor to this workshop. The following persons also participated in this consultation:

Liverpool VCT, Kenya
Jane Karongehati
Youniter Mutsungah

University of Washington
Shana Sniffen

Project San Francisco, Rwanda
Dvora Joseph
Mechtilda Mukankuku
Vestine Mutarabayrie

ZEHRP, Zambia
Lucy Banda
Steven Dunham
Elias Gudo
James Mubonde

Tebelopele VCT, Botswana
Mary Grace Alwano

Dr. Elizabeth Marum, June Odoyo, and Jane Tipton from CDC-Kenya coordinated a consultation of counselors from Kenyan VCT sites in December 2003 to share their experiences and present case studies. The following persons in Kenya shared their expertise:

Baraka Clinic
Chrisphen Simbiri

Eastern Deanery AIDS Relief Program
George Otieno Owiso

Kenyatta National Hospital
Francis Kathambana
Christine Otieno

Kibera Community Self-Help Program
Fillet Darizu
Phyllis Kitavi
Evelyn Wasonga

Tivoli VCT
Maurice Abuodha
Pamela Menya

Vel McKleroy, Ben Bellows, Megan Thorley, and Walker Tisdale from CDC facilitated a one-week workshop in September 2002 at the AIDS Information Center (AIC) in Kampala, Uganda, to outline a couples HIV counseling and testing framework. The following persons participated in this workshop:

Tebelopele VCT, Botswana
Nkopane Mfolwe
Monkie Morake

CDC Uganda
Margaret Achom
Humphrey Masaba

MACRO, Malawi
Tamara Phiri
S. William

Project San Francisco, Rwanda
Mechtilde Mukankuku
Vestine Mutarabayire

National DOH, South Africa
Cleopatra "Cleo" Sehloho
Nosimilo "Milo" Zama

Liverpool School of Tropical Medicine, Kenya
Youniter Mutsungah

Ministry of Public Health, Thailand
Kanyarat "Toom" Klumthanom
Suporn Koetsawang

Kenyatta National Hospital, Kenya
Christine Magambo

AIC/TASO/Ministry of Health, Uganda
Janet Bahizi
Alice Berigija
Kellen Tumuhairwe

ZEHRP, Zambia
Lucy Banda
Elias Gudo
James Mubonde

Michael Iatesta and the VCT Team identified the important role that Couples HIV Counseling and Testing (CHCT) could play in HIV prevention. He convened a consultation of experts and researchers in Atlanta, Georgia, in August 2002 to review the scientific basis for couples counseling and to identify the critical issues to be considered in developing a counseling and testing intervention for couples. The following persons contributed to this meeting:

CDC
Mary Kamb
Janet Moore
Ann O'Leary
Tom Painter
Kathy Parker
R.J. Simonds
Megan Thorley

HRSA
Beth Dillon

Emory University
Susan Allen

University of Alabama-Birmingham
Leslie Clark
Joseph Telfair

University of North Carolina at Chapel Hill
Priya Satow

University of Zambia
Alan Haworth

Foreword

The *Couples HIV Counseling and Testing (CHCT) Intervention and Training Curriculum* was developed in response to increased demand from field partners for interventions and training that would help them address the complex issues related to HIV counseling and testing (HCT) with couples. The materials are intended to guide trainers and participants through a general course covering essential topics and activities for the CHCT provider. By addressing CHCT technical content, and counseling and communication skills through learning exercises and hands-on practice, the materials aim to increase the skills of counselors who provide HCT to couples. Working with couples can be challenging and complex, even for the most experienced counselor. This manual was developed to address the challenges faced by these counselors in the field.

The goal of this manual is to guide trainers in training HIV prevention counselors to conduct CHCT sessions. The modules outlined in the curriculum will build upon the existing counseling skills of HCT providers so that they may help individuals in a couple understand the results of their HIV tests, as well as the importance of preventing all of their partners from becoming infected with HIV.

CHCT has emerged as an important intervention aimed at preventing the transmission of HIV between sex partners, and cohabiting or married couples. HIV prevention counselors can assist couples by:

1. Providing clear and accurate prevention messages tailored to the couple's life stage and reasons for seeking HCT services
2. Mitigating tension and diffusing blame
3. Dispelling myths about HIV transmission
4. Creating an environment that is safe for disclosure of HIV status among partners; and
5. Discussing options for disclosure of HIV status to the couple's children, and thinking through appropriate next steps for testing children, when necessary.

The materials found in this intervention and curriculum package were designed for experienced HIV prevention counselors currently working in HCT sites, regardless of whether they have prior experience counseling couples or not. This manual is not intended for HCT providers in health facilities such as prevention of mother-to-child transmission (PMTCT) sites or tuberculosis (TB) clinics. Couples HIV counseling and testing is an important intervention in these settings, however, and an abbreviated version of the CHCT intervention found in this manual will be optimal for those who will provide HCT services in these sites and settings.

Persons planning to utilize these materials should note that the audience for the training should not be persons who are new to HIV testing and counseling, but rather should be persons with experience providing counseling or with a baseline of clinical skills.

The materials, instructional design, and formatting of this training package were field tested in South Africa, Kenya, and Botswana in 2004. In January 2006, the final field test was conducted in Kenya. These materials were also used in CDC-led trainings conducted in Botswana, Malawi, and Ethiopia in 2005, in Namibia in 2006, and in Nigeria in 2007. Local co-trainers and participants in early pilot tests of this manual provided valuable feedback that was used to strengthen these training materials.

As with any training package developed for use in a variety of countries, it will be necessary to review this document and tailor it based on the country's HIV counseling and testing policies and guidelines; current treatment availability; local and regional realities; cultural norms of couples seeking HCT services; and current and future foreseeable trends in HIV prevention, care, treatment, and support. Although these materials were designed primarily for use in international settings, they may also be adapted for use with couples in the United States.

Several countries have introduced policies and HCT guidelines supporting and promoting CHCT. As a response to the growing demand for these services, some countries have already met with key local partners, adapted earlier drafts of these materials, and begun implementing CHCT trainings.

Foreword

Abbreviations

Module One: Background and Discordance

Module Perspective and Objectives.....	1
Welcome and Introductions	4
Goals, Objectives and Ground Rules.....	7
Icebreaker	12
Pre-course Knowledge Assessment.....	14
Couple Counseling and Testing: Advantages.....	15
Importance of CHCT and discussing Discordance with Couples	19
Wrap Up: Importance of CHCT.....	27
References.....	28
Handouts.....	36
PowerPoint Slides.....	38

Module Two: Introduction to Couple Counseling Skills

Module Perspective and Objectives.....	46
Basic Counseling Skills.....	49
Essential Skills and Attributes of the Couple Counselor.....	52
Self Awareness Exercise	56
Other Issues that may influence Counselor to Provide Quality Service	59
Couple Counseling Skills	62
Forming Alliances.....	64
Directing Communication.....	68
Mediation Skills for Easing Tension and Diffusing Blame.....	71
Solution-Focused Model of Couple Counseling.....	78
Role Play: Family Planning Exercise	81
Handouts.....	84
PowerPoint Slides.....	92

Module Three: Initial Session of the CHCT Intervention

Module Perspective and Objectives.....	99
Morning Review	102
Roles and Responsibilities of the Couple in CHCT Sessions.....	103
Getting Started: The CHCT Intervention's Initial Session.....	105
Component I: Introduce Couple to CHCT.....	110
Types of Couples Seeking HIV Counseling and Testing Services	114
Component II: Explore Couples Relationship and Reason for seeking CHCT.....	123
Component III: Discuss the Couples HIV Risk Concerns	131
Component IV: Prepare for Testing and Discuss Possible Results.....	137
Choosing How to Deliver HIV Test Results and Preparing the Couple	140
Role Play Initial Session of Components I-IV and Wrap Up.....	143
References.....	146
Handouts.....	147
PowerPoint Slides.....	157

Module Four: Providing Concordant Negative Results

Module Perspective and Objectives.....	168
Component V-A: Provide Concordant Negative Results	170

Component VI-A: Discuss Risk reduction for Concordant Negative Couple	173
Role Play: Post-Test Session Concordant Negative Couple	178
Wrap Up	181
Handouts	182
PowerPoint Slides	187

Module Five: Providing Concordant Positive Results

Module Perspective and Objectives.....	192
Morning Review	195
Component V-B: Provide Concordant Positive Results.....	197
Component VI-B: Discuss Coping and Mutual Support.....	200
Component VII-B: Discuss Positive Living and HIV Care and Treatment	202
Component VIII-B: Discuss Things to do at Home to Keep Healthy	205
Component IX-B: Discuss Risk Reduction.....	207
Values Classification Exercise	209
Component X-B: Discuss Children, Family Planning and PMTCT Options.....	212
Disclosure Benefits and Basics.....	217
Component XI-B: Discuss Disclosure and Getting Support.....	220
Review Counseling Skills.....	226
Role Play: Post-Test Session Concordant Positive Couple.....	228
Processing the Role Play	230
Wrap Up	231
References.....	231
Handouts	232
PowerPoint Slides	249

Module Six: Providing Discordant Results

Module Perspective and Objectives.....	258
Welcome and Brief Review	261
Factors that Influence Transmission of HIV	265
Discordance Essentials.....	270
Component V-C: Provide Discordant Test Results.....	273
Component VII-C: Discuss Risk Reduction	279
Exercise to Review Component VI-C to XI-C	282
Role Play: Providing discordant results	289
Handouts	292
PowerPoint Slides	316

Module Seven: Support and Prevention Services

Module Perspective and Objectives.....	322
Morning Review	324
Support Services.....	325
PowerPoint Slides	335

Module Eight: Outreach and Recruitment

Module Perspective and Objectives.....	339
Outreach	341
Closing Exercise	353
References.....	355
