

CDC in CAMBODIA

Accessible version: <https://www.cdc.gov/globalhealth/countries/cambodia>

The Centers for Disease Control and Prevention (CDC) established an office in the Kingdom of Cambodia in 2002. CDC works with the country's Ministry of Health (MOH) and local and international partners to address HIV/AIDS, tuberculosis (TB), malaria, influenza, and COVID-19. CDC's partnership with the MOH strengthens Cambodia's laboratory, surveillance, and workforce capacities to respond to disease outbreaks.

CDC Cambodia provided guidance and training to public health responders working on the COVID-19 response

CDC Cambodia supported the Ministry of Health's Emergency Operations Center

As of December 2020, 36 graduates completed the Frontline Field Epidemiology Training Program (FETP). These epidemiologists detect, prevent, and control diseases before they become epidemics

Through the U.S. President's Emergency Plan for AIDS Relief (PEPFAR), CDC is working with Cambodia to end AIDS as a public health threat by 2025

CDC works with Cambodia's national HIV and TB control programs to screen for TB among people living with HIV and provide TB preventive treatment

CDC Cambodia helped implement a laboratory quality management system (LQMS) and obtain accreditation for HIV hub laboratories

With technical support from CDC, the Cambodian National Public Health Laboratory (NPHL) received International Organization for Standardization (ISO) 15189 Plus™ accreditation in February 2019 and was re-certified in November 2022

CDC malaria work in Cambodia, as part of the U.S. President's Malaria Initiative, includes surveillance, vector monitoring, case management and social and behavior change communication

CDC supports identification and characterization of circulating novel influenza viruses in Cambodia

Staff from the Battambang Hospital referral laboratory collect COVID-19 samples in Battambang, Cambodia. Photo by Chiek Sivhdur/Battambang Referral Hospital

Global Health Security

Resilient public health systems can rapidly prevent, detect, and respond to infectious disease threats before they become epidemics. CDC's team in Cambodia works to enhance the country's ability to respond to public health emergencies and strengthen workforce capacity. CDC also played a key role in the MOH's response to the COVID-19 pandemic.

HIV/AIDS and TB

CDC works with the MOH to build a sustainable HIV response program. Cambodia strives to sustain epidemic control and eliminate HIV. CDC focuses on:

- Finding people with undiagnosed HIV and placing them on treatment
- Ensuring treatment continuity and treatment services for all, including children and adolescents
- Developing an HIV case-based surveillance system that uses real-time data from HIV recency testing to find and respond to outbreaks
- Improving laboratory systems to detect and monitor HIV
- Adopting and ensuring nationwide implementation of international HIV policies
- Supporting the national HIV and TB control programs to ensure that people living with HIV are screened for TB and receive TB preventive treatment

Laboratory Capacity Building

CDC helps strengthen the quality of laboratory systems in Cambodia to accurately diagnose, monitor, and treat infections, including HIV/AIDS,

COVID-19, TB, and influenza viruses. CDC also helped implement a laboratory quality management system and supports HIV hub laboratories to achieve international accreditation.

Malaria

Through the U.S. President's Malaria Initiative (PMI), CDC works with Cambodia's National Center for Parasitology, Entomology and Malaria to pilot and expand malaria elimination activities in Western Cambodia. PMI supports the National Malaria Elimination Action Framework to scale up control and elimination activities for a malaria-free Cambodia by 2025. CDC and partners provide:

- Technical assistance for surveillance (antimalarial drug resistance and insecticide resistance)
- Case management
- Supply chain management
- Vector monitoring
- Social and behavior change communication

Influenza

CDC works with the Cambodian government and other partners to help build influenza surveillance and laboratory capacity. Cambodia contributes to the World Health Organization's (WHO) Global Influenza Network.

CDC STAFF

3 U.S. Assignees
18 Locally Employed

AT A GLANCE

Population: >16.8 million
Per capita income: \$4,430
Life expectancy: F 73 / M 67 years
Infant mortality rate: 12/1,000 live births
