2012 Fact Sheet

The 2012 Taiwan GSHS measured alcohol use; dietary behaviors; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury.

The Taiwan GSHS was a school-based survey of students in grades 1, 2, and 3. A two-stage cluster sample design was used to produce data representative of all students in grades 1, 2, and 3 in Taiwan. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 93%, and the overall response rate was 93%. A total of 6801 students participated in the Taiwan GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
