

The 2013 Taiwan Senior HS GSHS was a school-based survey of students in grades 1, 2, and 3, which are typically attended by students aged 13 - 17 years. A two-stage cluster sample design was used to produce data representative of all students in Taiwan Senior HS. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Taiwan Senior HS GSHS measured alcohol use; dietary behaviors; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury. Students self-reported their responses to each question on a computer scanable answer sheet. The school response rate was 100%, the student response rate was 90%, and the overall response rate was 90%. A total of 5252 students participated in the Taiwan Senior HS GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.
