

STATE OF NEW YORK DEPARTMENT OF HEALTH

Corning Tower The Governor Nelson A. Rockefeller Empire State Plaza Albany, New York 12237

Richard F. Daines, M.D.
Commissioner

James W. Clyne, Jr.
Executive Deputy Commissioner

October 2009

Dear Provider:

This letter provides information about how to register your practice (located outside of New York City*) for the 2009 influenza A (H1N1) monovalent vaccine to be administered to your patients and office staff.

The novel H1N1 influenza virus, in conjunction with regular seasonal influenza viruses, has the potential to cause significant illness, hospitalizations and deaths this flu season starting this fall. Influenza vaccination is the most effective method to prevent influenza infection. The 2009 influenza A (H1N1) monovalent vaccine is expected to be available by mid-October 2009. In cooperation with the federal government and local health departments, the New York State Department of Health (NYSDOH) will make the H1N1 vaccine available to health care providers in New York State (outside New York City). This undertaking will require the active participation of a wide range of immunization providers and office-based providers will play a key role in delivering influenza vaccine to their targeted patients.

Initially, the following populations are recommended by the CDC as critical to receive the 2009 influenza A (H1N1) monovalent vaccine as soon as possible.

- Pregnant women
- Household contacts and caregivers for children younger than 6 months of age
- Healthcare and emergency medical services personnel
- All people from 6 months through 24 years of age
- Persons aged 25 through 64 years who have health conditions associated with higher risk of medical complications from influenza

Once these populations are vaccinated, then the vaccine will be made available to other populations. The full recommendations are available in the Morbidity and Mortality Weekly Report, August 28, 2009/58 at <http://www.cdc.gov/mmwr/preview/mmwrhtml/rr5810a1.htm>.

Both the vaccine and the supplies required to administer the vaccine will be provided by the Federal government at no charge. Reimbursement for vaccine administration is likely to be covered by most private health insurers and will be covered by public health insurance (Medicaid/Medicare) plans.

Issues regarding the liability and costs associated with administering the 2009 influenza A (H1N1) monovalent vaccine are being addressed. The United States Department of Health and Human Services has issued a Public Readiness and Emergency Preparedness "PREP" Act declaration for novel H1N1 influenza countermeasures. This declaration provides liability protections to providers of H1N1 influenza vaccine.

*To obtain H1N1 vaccine in New York City, contact the NYC Department of Health and Mental Hygiene at <http://www.nyc.gov/html/doh/html/cir/a03c.html> or call 212-676-2323.

The allocation and distribution of the vaccine in New York State (outside New York City) will be managed by the NYSDOH in coordination with county health departments. In order to receive the 2009 influenza A (H1N1) monovalent vaccine, providers must register with NYSDOH. The information you provide will assist in allocating H1N1 vaccine throughout the State, taking into consideration the targeted population groups to receive the initial doses of H1N1 vaccine.

Registration: All providers interested in receiving 2009 influenza A (H1N1) monovalent vaccine must register at <https://hcsteamwork1.health.state.ny.us/pub/top.html>.

- This registration process is designed for you to express interest only and does not obligate you to receive/administer vaccine nor does it guarantee you will receive vaccine if supplies are limited.

Requirements for receipt of vaccine:

- In order to receive the 2009 influenza A (H1N1) monovalent vaccine, providers must review and agree to the terms of a federally-mandated Provider Agreement assuring appropriate storage and handling, administration, and accountability of the vaccine.
- New York State Law requires that all vaccinations of pediatric patients (less than 19 years of age) be entered into the New York State Immunization Information System (NYSIIS), the state's immunization registry. Providers administering H1N1 vaccine to children will be required to participate in NYSIIS (see attached fact sheet).
 - 47 electronic health record/billing vendors are approved to automatically upload immunization information into NYSIIS.
- There is a federal requirement that providers of vaccine to adults (age 19 years and older) report weekly the vaccine doses administered by age group and vaccine inventory. NYSDOH is developing an interactive voice response system for this purpose.

Once your registration is received and the remaining details of the vaccination campaign have been finalized, you will be contacted by the vaccine program and instructed how to order vaccine.

Reporting to the NYS Immunization Information System (NYSIIS).

Although only required for pediatric providers, ALL providers are encouraged to use NYSIIS for tracking the 2009 influenza A (H1N1) monovalent vaccine. NYSIIS users must establish a NYSDOH Health Commerce System (HCS) account to gain access. Establishing a HCS account can be done through the registration link above.

NYSIIS provides a number of advantages for providers of 2009 influenza A (H1N1) monovalent vaccine: 1) automatically generates the federally mandated weekly vaccine usage reports, 2) monitors vaccine inventory to enable prompt reordering, 3) generates reminder lists and letters for the second influenza vaccine dose, if required, 4) provides a legal record of the vaccination, 5) enables correct ascertainment of prior influenza vaccine history if patients receive some influenza vaccine doses (seasonal and/or monovalent H1N1) at other provider sites, and 6) enables NYSDOH to more closely monitor possible vaccine adverse events. Details on how to participate in NYSIIS are provided at the completion of the registration process.

If you are not able to provide vaccine you can still contribute by educating and referring your patients and by volunteering at a public health-sponsored clinic. For information on volunteering, please go to www.nyhealth.gov/ServNY.

Your participation in the 2009 influenza A (H1N1) monovalent vaccine campaign is essential to ensuring that New Yorkers receive the most effective protection against H1N1 influenza. For more information on the 2009 influenza A (H1N1) monovalent vaccine, please go to the NYSDOH website at: <http://www.health.state.ny.us/diseases/communicable/influenza/h1n1/> or the Centers for Disease Control and Prevention's (CDC) website at: <http://www.cdc.gov/h1n1flu/>. If you have any further questions, please contact the NYSDOH Vaccine Call Center at 1-800-KID-SHOT (543-7468).

Sincerely,

A handwritten signature in black ink that reads "Guthrie Birkhead MD". The signature is written in a cursive style.

Guthrie S. Birkhead, M.D., M.P.H.
Deputy Commissioner
Office of Public Health

Enclosure – NYSIIS and H1N1 Fact Sheet

The New York State Immunization Information System (NYSIIS)

and H1N1 Vaccine

What is NYSIIS?

The New York State Immunization Information System (NYSIIS) is a confidential, secure, web-based system that maintains one consolidated immunization record for persons of all ages in New York State (outside of New York City). Public Health Law 2168 mandates health care providers report information on vaccinations administered to all persons less than 19 years of age. New York State Department of Health is working to eliminate the requirement for separate written consent for individuals 19 years of age and older.

As of September 2009, NYSIIS contains more than 2.4 million patient records and nearly 28 million immunizations. There are more than 6,800 individual users from 2,200 different health care provider organizations and 1,012 schools across the state.

New York State is not alone in this endeavor. As a nation, we are targeting the Healthy People 2010 goal of having 95% of children less than six years of age with two or more immunizations in an immunization information system. NYS is making great strides toward this goal. We are at 65.7% as of September 2009 – nearly double were we were one year ago.

Why Do We Need NYSIIS?

For the H1N1 campaign, NYSIIS will be essential for information tracking. The system will allow users to track vaccine inventory and usage on a daily and weekly basis, as required by the Federal government; will provide a key source of information on possible adverse events; will facilitate the generation of reminders for the likely second H1N1 dose by medical practices; will allow review of practice coverage rates, and will serve as a record of the immunization. In addition, by consolidating vaccinations from multiple visits and possible multiple providers into one reliable record, time and paperwork are reduced and accurate immunization histories for providers, patients, schools, camps, day-care centers and colleges will be available.

Will I need to participate in NYSIIS to receive H1N1 vaccine?

Providers who administer any immunization to persons less than 19 years of age are required by state law to report to NYSIIS. This includes the 2009 influenza A (H1N1) monovalent vaccine. Providers are also strongly encouraged to use NYSIIS to track immunization information for persons 19 years of age and older.

While many providers that immunize children already participate in NYSIIS, most providers that care for adult patients are not yet participating. NYSDOH will provide training, education and technological support to assist new providers.

continued

How Do I Get Access to NYSIIS?

NYSIIS is accessed via the Health Commerce System (HCS), designed for the electronic exchange of health related data and information between health care providers and NYSDOH. Licensed health care professionals can apply for an HCS account at:

<https://hcsteamwork1.health.state.ny.us/pub/top.html>

Once an HCS account has been established, providers must complete NYSIIS training, which authorizes access to NYSIIS. These training opportunities can be found at:

https://commerce.health.state.ny.us/hpn/bcdc/immunization/training_info.html.

How Do I Report Immunizations?

H1N1 immunizations can be reported using direct on-line data entry or by batch file transfer from an electronic health record or billing system. The following 47 systems are already approved to submit data to NYSIIS:

ACME	Medical Communication Systems
ADS (Medex Premiere) (NEIC)	Medical Manager
Allscripts - MYSIS	Medisoft/Medinotes
CDS (Contemporary Data Services)	Meditech
Cerner System	MicroMD
CMI Medical Systems	Mitchell McCormick
EasyBilling	NextGen
Ecast	Office Practicum
Eclinical Works	PerfectCare
Eclipsys	Physician's Computer Company
EncounterPro	Physicians Solution
EPIC	PMP
EZImmune	PractiCare
GE Healthcare -Centricity	Practice Made Perfect
Hypocrates	Practice Partner
Iatric	Priority Management Group
McKesson	Pyramid Partner
MD Everywhere	Quicksilver Computers
MDOffice	Sage (Medical Manager)
Medallies (working with NextGen)	SoapWare
Medcomp	Synamed
MedData	Virtual Officeware
Medent (Community Computer/Health Sys Tech)	Welligent
Medfx	

Where Can I Get More Information?

Contact NYSIIS Program staff at (518) 473-2839 or nysiis@health.state.ny.us for additional information.
