

Targeted Assessment for Prevention (TAP) Strategy

Running TAP Reports

Rashad Arcement, MSPH

Objectives

- ❑ Review the steps for running Group level and Facility TAP Reports**
- ❑ Explain how to interpret the data represented in TAP Reports**
- ❑ Comparing the data represented in Group and Facility TAP reports**
- ❑ Demonstration: Generating a Facility TAP Report**

Standardized Infection Ratio (SIR)

- The SIR is a measure that compares the number of HAIs reported to NHSN to the number of infections that would be predicted based on national baseline data:

$$\text{SIR} = \frac{\text{Observed \# of HAIs}}{\text{Predicted \# of HAIs}}$$

- **SIR interpretation:**

- 1 = same number of infections reported as would be predicted given the US baseline data
- Greater than 1 = more infections reported than what would be predicted given the US baseline data
- Less than 1 = fewer infections reported than what would be predicted given the US baseline data

Cumulative Attributable Difference (CAD)

- CAD is a measure that shows difference between the number of observed infections and 'predicted infections multiplied by a SIR goal' in a defined period

$$\text{CAD} = \text{Observed no. of HAIs} - (\text{Predicted no. of HAIs} \times \text{SIR goal}^1)$$

- **CAD Interpretation:**

- Values range from $-\alpha$ to $+\alpha$
- Positive CAD = additional burden of infections than what would be predicted with regard to a SIR goal ("excess" infections)
- Negative CAD = fewer infections than what would be predicted

¹ SIR goal represents 'HAI reduction goal'

CAD and the HAI Reduction Goal

CAD = Observed – (Predicted x SIR goal)

SIR goal represents 'HAI reduction goal'

➤ e.g. HHS 25% reduction goal for CAUTI → SIR=0.75

Hospital A: observed=30, predicted=10, SIR=3.0 in 2014

HHS Reduction Goal (Reduction in Expected	SIR goal	CAD	CAD
0%	1.0	30 – (10 x 1.0) or 30 – 10	20*
25% HHS national goal	0.75	30 – (10 x 0.75)	22.5*
50%	0.50	30 – (10 x 0.50)	30*

* number of infections in 2014 that must be prevented to reach a HAI reduction goal.

Helpful Hints for Running TAP Reports

- ❑ TAP reports are built on the rules that influence SIRs
- ❑ Verify that an up-to-date data set was generated
- ❑ Remember to look at the footnotes!

If location-level CADs are the same in a given facility, their ranks are tied.

(CNS,YS,SA,ES,KS,EC) = No. of CNS, Yeast (both candida and non-candida species), Staph aureus, Enterococcus species, K. pneumoniae/K. oxytoca, E. coli

SIR is set to '.' when expected number of events is <1.0.

LOCATION CAD = (OBSERVED_LOCATION - EXPECTED_LOCATION)*SELECTED CAD MULTIPLIER)

SIR TEST = 'SIG' means SIR > SIR Goal significantly
