**Stay healthy around pet reptiles and amphibians!**

Reptiles (such as snakes, lizards, and turtles) and amphibians (such as frogs and toads) can sometimes carry germs that can make people sick. These germs can cause illnesses ranging from fever to serious diarrhea.

- Amphibians and reptiles can carry germs even if they look healthy and clean.
- Germs are shed in their droppings and can easily contaminate their bodies and anything in areas where they live and roam, such as their habitat or aquarium tank water.
- These germs can spread to people after they touch these animals or anything in their habitats.

**But there's good news! You can take steps to stay healthy while enjoying your pets.**

**PROTECT YOURSELF AND YOUR FAMILY FROM GERMS**

**WASH YOUR HANDS.**

Always wash hands thoroughly with soap and water right after touching, feeding, or caring for your pets or cleaning their habitats.

- Adults should supervise hand washing for young children.
- If soap and water are not readily available, use hand sanitizer until you are able to wash your hands thoroughly with soap and water.

**KEEP IT CLEAN.**

Keep amphibians and reptiles out of kitchens and other areas where food is prepared, served, stored, or consumed.

- Clean habitats and supplies outside the house when possible.
- If you clean supplies indoors, use a laundry sink or bathtub, and thoroughly clean and disinfect the area right after.

**PLAY SAFELY.**

- Don’t kiss, snuggle, or hold reptiles and amphibians close to your face.
- Don’t let them roam free in your home.
- Don’t touch your mouth after handling reptiles and amphibians.
- Don’t eat or drink around animals.
