School Health Services

How Can You Help?

Qualified professionals, such as registered nurses, nurse practitioners, dentists, health educators, physicians, physician assistants, and allied health personnel, provide a variety of services to students and families. School health service providers deliver first aid and acute and emergency care for students and assist with managing chronic conditions (such as asthma or diabetes) at school. They also promote prevention and wellness by providing or verifying vaccines, encouraging proper nutrition and physical activity, and providing health education for both students and parents.

School health services staff can connect students and their families to community and other health care providers and promote a healthy and safe school environment. Some schools have school-based health centers that deliver direct medical, dental, nutritional, and mental health services to both students and families.

Knowing the answers to the following questions can help you support your child’s school to provide health services. If you don’t know the answers to these questions, check out the school handbook or school website, attend a school wellness meeting or Parent-Teacher Association (PTA) meeting, or simply ask your child's teacher.

1. Are there School Health Services, including a full-time registered nurse, in the school building at all times to help children with chronic medical conditions or with emergencies?
2. Is there a school-based health center available for students or their families?
3. How are medications and medical procedures administered at school? What are district policies about students carrying and self-administering medications?
4. Are there resources available at the school to help me find out if my child is eligible for health insurance and to help with enrollment forms?
5. Does the school nurse develop individualized health care plans for students with chronic health conditions?
6. Is there a bullying prevention policy in the school or district that discourages bullying or encourages awareness or anti-stigma of students with medical conditions?
7. Does the district and school promote a healthy school environment by providing good nutrition, physical activity, and health education opportunities?
8. Does the school district have a wellness policy to create and support a healthy school environment? If so, is the school following the policy?
You can be involved in your child's school by attending meetings, workshops, or training events offered by the school; communicating with school staff and other parents; volunteering for school events or in your child's classroom; reinforcing healthy messages and practices your child learns at school; helping make decisions about health in the school; and being part of community activities supported by the school. Here are some specific ideas for how you can support your child’s school in providing health services.

➜ Have an ongoing conversation with your child to discuss their health concerns. Find out if your child feels safe and supported at school.6

➜ Work with your child’s health care provider to coordinate care for health issues with school nurses and other health service staff and to ensure required school forms are completed. Encourage communication between school health services and your child's health care provider.

➜ Communicate with your child’s teachers, counselors, and school nurse about your child’s health concerns and how they are coping while at school.

➜ Volunteer with your child, or get involved at school health events that promote healthy and active lifestyles.7

➜ Join a group such as the PTA, school wellness, or school health advisory council, that addresses the needs of a supportive and healthy school environment.7

➜ Get involved with community organizations that support the health and safety of children.

➜ Advocate for a full-time registered school nurse for every school.

➜ Volunteer to help write grants that may help to improve school health services.
