Analysis of State Health Education Laws

ARIZONA SUMMARY REPORT

Overview
State laws and regulations in health education serve as a foundation to drive school-based programs and instruction. Well-designed and well-implemented sexual health education programs have been shown to reduce student risky sexual behaviors and improve health-related behaviors and outcomes. The following report provides a snapshot of Arizona laws and regulations and school health policies and practices related to sexual health education, HIV prevention education, STD prevention education, and sexual health risk behaviors among Arizona high school students.

Arizona health education laws and regulations were analyzed across three topics of instruction (sexual health education, HIV Prevention, and STD Prevention) and a variety of characteristics related to curriculum and instruction. These characteristics were identified by researchers as potential facilitators for successful programs. The law and regulation data presented only indicate the presence or absence of a particular component related to health education and may not accurately reflect practice within the state.

Arizona Law Facts
- Local Education Agencies have the authority to choose or approve curriculum for sexual health education instruction.
- Parents/Guardians must be provided the opportunity to Opt-in students to sexual health education instruction and Opt-out students from HIV Prevention instruction.
- Instruction regarding contraception is not addressed.
- Abstinence is a required topic of instruction for sexual health education and HIV Prevention.

Analysis of State Health Education Laws

School Health Policies and Practices in Arizona

71% of secondary schools provided those who teach sexual health education with strategies that are age-appropriate, relevant, and actively engage students in learning.

48% of secondary schools taught how HIV and other STDs are transmitted in a required course during grades 9, 10, 11, or 12.

Percent of secondary schools in Arizona in which teachers tried to increase student knowledge on:

- Human Sexuality: 31%
- HIV Prevention: 36%
- STD Prevention: 35%

Risk Behaviors Among Arizona High School Students

- Have had sexual intercourse with ≥4 partners: 11%
- Drank alcohol or used drugs before last sexual intercourse*: 24%
- Used a condom during last sexual intercourse*: 55%

In a classroom of 30 high school students in Arizona:

- 9 are currently sexually active,
- 3 ever had sex, but are not currently sexually active,
- 18 never had sex.

*Among the students in Arizona who were currently sexually active (had sexual intercourse during the 3 months before the survey).
