Analysis of State Health Education Laws

OHIO SUMMARY REPORT

Overview
State laws and regulations in health education serve as a foundation to drive school-based programs and instruction. Well-designed and well-implemented sexual health education programs have been shown to reduce student risky sexual behaviors and improve health-related behaviors and outcomes. The following report provides a snapshot of Ohio laws and regulations and school health policies and practices related to sexual health education, HIV prevention education, STD prevention education, and sexual health risk behaviors among high school students nationwide.

Ohio health education laws and regulations were analyzed across three topics of instruction (sexual health education, HIV Prevention, and STD Prevention) and a variety of characteristics related to curriculum and instruction. These characteristics were identified by researchers as potential facilitators for successful programs. The law and regulation data presented only indicate the presence or absence of a particular component related to health education and may not accurately reflect practice within the state.

Ohio Law Facts
- The State Education Agency and Local Education Agencies have the authority to choose or approve curriculum for STD Prevention instruction.
- Parents/Guardians must be provided the opportunity to Opt-out students from STD Prevention instruction.
- Instruction regarding contraception is not addressed.
- Abstinence is a required topic of instruction for sexual health education and STD Prevention.

Analysis of State Health Education Laws

School Health Policies and Practices in Ohio

**STRATEGIES**

67% of secondary schools provided those who teach sexual health education with strategies that are age-appropriate, relevant, and actively engage students in learning.

**STD PREVENTION**

96% of secondary schools taught how HIV and other STDs are transmitted in a required course during grades 9, 10, 11, or 12.

Percent of secondary schools in Ohio in which teachers tried to increase student knowledge on…

- **75%** Human Sexuality
- **79%** HIV Prevention
- **81%** STD Prevention

Risk Behaviors Among High School Students Nationwide

- 12% Have had sexual intercourse with ≥4 partners
- 21% Drank alcohol or used drugs before last sexual intercourse*
- 57% Used a condom during last sexual intercourse*

In a classroom of 30 high school students nationwide,

- 9 are currently sexually active,
- 3 ever had sex, but are not currently sexually active,
- 18 never had sex.

*Among the students nationally who were currently sexually active (had sexual intercourse during the 3 months before the survey).

Source: School Health Profiles (Profiles), 2016. Profiles is a national survey of middle and high school principals and lead health education teachers assessing school health policies and practices in states, large urban school districts, and territories.

Note: Ohio participated but did not receive weighted data for the 2015 YRBS.
