Analysis of State Health Education Laws
TEXAS SUMMARY REPORT

Overview
State laws and regulations in health education serve as a foundation to drive school-based programs and instruction. Well-designed and well-implemented sexual health education programs have been shown to reduce student risky sexual behaviors and improve health-related behaviors and outcomes. The following report provides a snapshot of Texas laws and regulations related to sexual health education, HIV prevention education, STD prevention education, school health policies and practices across states and sexual health risk behaviors among high school students nationwide.

Texas health education laws and regulations were analyzed across three topics of instruction (sexual health education, HIV Prevention, and STD Prevention) and a variety of characteristics related to curriculum and instruction. These characteristics were identified by researchers as potential facilitators for successful programs. The law and regulation data presented only indicate the presence or absence of a particular component related to health education and may not accurately reflect practice within the state.

Texas Law Facts
- The agency with authority to choose or approve curriculum for sexual health education instruction is not addressed.
- Parents/Guardians must be provided the opportunity to Opt-out students from sexual health education instruction.
- Instruction regarding contraception is required for sexual health education.
- Abstinence is a required topic of instruction for sexual health education.

Analysis of State Health Education Laws

School Health Policies and Practices Nationwide

**STRATEGIES**

56–94% of secondary schools provided those who teach sexual health education with strategies that are age-appropriate, relevant, and actively engage students in learning.

**STD PREVENTION**

48–100% of secondary schools taught how HIV and other STDs are transmitted in a required course during grades 9, 10, 11, or 12.

Median percent of secondary schools in the U.S. in which teachers tried to increase student knowledge on…

- **79%** Human Sexuality
- **86%** HIV Prevention
- **86%** STD Prevention

Risk Behaviors Among High School Students Nationwide

- 12% Have had sexual intercourse with ≥4 partners
- 21% Drank alcohol or used drugs before last sexual intercourse*
- 57% Used a condom during last sexual intercourse*

In a classroom of 30 high school students nationwide, 9 are currently sexually active, 3 ever had sex, but are not currently sexually active, 18 never had sex.

*Among the students nationally who were currently sexually active (had sexual intercourse during the 3 months before the survey).

Note: Texas participated but did not receive weighted data for the 2015 YRBS and did not obtain representative data for the selected questions from the 2016 Profiles.
