Alcohol- or Other Drug-Use Prevention

About SHPPS: SHPPS is a national survey periodically conducted to assess school health policies and practices at the state, district, school, and classroom levels. SHPPS was conducted in 1994, 2000, and 2006. The 2012 study collected data at the state and district levels only. School- and classroom-level data collection will take place in 2014.

Health Education

During the 2 years before the study:

- 60.8% of states and 66.0% of districts provided funding for professional development or offered professional development to those who teach health education on alcohol- or other drug-use prevention.

During the 12 months before the study:

- 64.7% of states provided technical assistance to district or school staff on the content of instruction for alcohol- or other drug-use prevention.

Faculty and Staff Health Promotion

- 50.0% of states offered health insurance to faculty and staff in districts and schools that included full or partial coverage of alcohol- or other drug-use treatment.

- 84.4% of districts offered health insurance to faculty and staff that included full or partial coverage of alcohol- or other drug-use treatment.

Health Services and Mental Health and Social Services

- The percentage of districts that required schools to provide alcohol- or other drug-use treatment services decreased from 46.2% in 2000 to 30.4% in 2012.\(^1\)

- 61.5% of districts required schools to provide alcohol- or other drug-use prevention services.

- 35.1% of districts had arrangements with any organizations or mental health or social services professionals to provide alcohol- or other drug-use treatment at other sites not on school property.

- The percentage of districts that provided funding for professional development or offered professional development to school nurses on alcohol- or other drug-use prevention decreased from 47.0% in 2000 to 34.7% in 2012.

- The percentage of districts that provided funding for professional development to mental health or social services staff on alcohol- or other drug-use treatment services decreased from 67.5% in 2000 to 50.3% in 2012.

\(^1\) Regression analyses were performed that took all available years of data into account. To account for multiple comparisons, selected changes are included only if the p-value from the trend analysis was less than .01, and either the difference between the two endpoints (2000 and 2012) was greater than 10 percentage points or the 2012 estimate increased by at least a factor of two or decreased by at least half as compared to the 2000 estimate.
The percentage of states that provided funding for professional development or offered professional development to school nurses on alcohol- or other drug-use services during the 2 years before the study was 79.2%. The percentage of states that provided funding for professional development or offered professional development to mental health or social services staff on alcohol- or other drug-use services during the 2 years before the study was 77.1%.

The percentage of districts that provided funding for professional development or offered professional development to school faculty or staff on how to implement school-wide policies and programs on alcohol-use prevention or illegal drug-use prevention decreased from 73.3% in 2006 to 62.8% in 2012 and from 76.7% in 2006 to 64.9% in 2012, respectively.

### Safe and Healthy School Environment
