## **Hepatitis A can be prevented with a safe and effective vaccine.**

Hepatitis A is a liver infection caused by the hepatitis A virus. The virus is very contagious and spreading from person to person and causing an outbreak.

### **Who should get vaccinated?**

- People who use drugs
- People who have unstable housing or are homeless
- People who are or were recently in jail or prison
- Men who have sex with men
- People with hepatitis C or other serious liver problems
