Of the **36,801 NEW HIV DIAGNOSES** in the US and dependent areas* in 2019, 26% (9,421) were among Black/African American† gay and bisexual men.‡ **

About 3 out of 4 Black/African American gay and bisexual men who received an HIV diagnosis were aged 13 to 34.

---

* American Samoa, Guam, the Northern Mariana Islands, Puerto Rico, the Republic of Palau, and the US Virgin Islands.
† Black refers to people having origins in any of the Black racial groups of Africa. African American is a term often used for people of African descent with ancestry in North America. This fact sheet uses African American, unless referencing surveillance data.
‡ This fact sheet uses the term gay and bisexual men to represent gay, bisexual, and other men who reported male-to-male sexual contact.
** Includes infections attributed to male-to-male sexual contact and injection drug use (men who reported both risk factors).
†† Hispanic/Latino people can be of any race.
‡‡ In 50 states and the District of Columbia.
Black/African American gay and bisexual men who don’t know they have HIV cannot get the care and treatment they need to stay healthy.

In 2019, an estimated **1.2 MILLION PEOPLE** had HIV. Of those, **235,400** were Black/African American gay and bisexual men.

For every 100 people with HIV

- **87** knew their HIV status.

For every 100 Black/African American gay and bisexual men

- **83** knew their HIV status.

It is important for Black/African American gay and bisexual men to know their HIV status so they can take medicine to treat HIV if they have the virus. Taking HIV medicine every day can make the viral load undetectable. People who get and keep an undetectable viral load (or remain virally suppressed) can stay healthy for many years and will not transmit HIV to their sex partners.

In 2019, an estimated **1.2 MILLION PEOPLE** had HIV. Of those, **235,400** were Black/African American gay and bisexual men. **87** knew their HIV status.

For every **100 Black/African American gay and bisexual man with diagnosed HIV in 2019:**

- **75** received some HIV care
- **55** were retained in care
- **62** were virally suppressed

For comparison, for every **100 people overall** with diagnosed HIV,

- **76** received some care, **58** were retained in care, and **66** were virally suppressed.

There are several challenges that place some African American gay and bisexual men at higher risk for HIV.

### Delay in Linkage to HIV Medical Care

Not all African American gay and bisexual men with diagnosed HIV are linked to care within 90 days of the diagnosis.

### Socioeconomic Factors

Higher poverty rates among some African American gay and bisexual men can mean limited access to quality health care, HIV prevention education, and lower income, placing them at higher risk for HIV.

### Lower Viral Suppression Percentages

African American gay and bisexual men have lower percentages of viral suppression than gay and bisexual men of other races/ethnicities.

### Racism, HIV Stigma, and Homophobia

Racism, HIV stigma, and homophobia can negatively impact risk-taking behaviors, knowledge of HIV status, HIV care, and other needed services for many African American gay and bisexual men.

How is CDC making a difference for African American gay and bisexual men?

- Collecting and analyzing data and monitoring HIV trends.
- Conducting prevention research and providing guidance to those working in HIV prevention.
- Supporting health departments and community-based organizations by funding HIV prevention work and providing technical assistance.
- Supporting community organizations that increase access to HIV testing and care.
- Promoting testing, prevention, and treatment through the Let’s Stop HIV Together campaign.
- Strengthening successful HIV prevention programs and supporting new efforts funded through the Ending the HIV Epidemic in the U.S. initiative.

*** Includes infections attributed male-to-male sexual contact only. Among Black/African American men with HIV attributed to male-to-male sexual contact and injection drug use, **94%** knew they had HIV.

††† In **44 states and the District of Columbia**.
