African Americans had HIV in the US in 2015: 46,880.

- **85%** of those diagnosed are retained in care.
- **60%** of those retained in care are virally suppressed.

* Had 2 viral load or CD4 tests at least 3 months apart.

** A person with HIV who takes HIV medicine as prescribed and gets and stays virally suppressed or undetectable can stay healthy and has effectively no risk of transmitting HIV to HIV-negative partners through sex. Based on most recent viral load test.
