In 2017, Blacks/African Americans and Hispanics/Latinos accounted for 69% of HIV diagnoses but comprised only 31% of the U.S. population.

MSM diagnoses in 25–34 year olds increased by:

- +22% in Hispanics/Latinos
- +34% in Blacks/African Americans

Percentage of HIV Diagnoses in 2017

- Male-to-Male Sexual Contact (MSM): 67%
- Heterosexual Contact: 24%
- MSM/Injection Drug Use (IDU): 3%
- IDU: 6%

* Less than 1% of HIV diagnoses are in the 6 U.S. dependent areas: American Samoa, Guam, Northern Mariana Islands, Puerto Rico, Republic of Palau, U.S. Virgin Islands

† Data include diagnoses from the U.S. and 6 dependent areas. Data for the year 2017 are preliminary and based on 6 months reporting delay. Please use CDC’s Monitoring Selected National HIV Prevention and Care Objectives by Using HIV Surveillance data report for final year data.
