## **HIV/AIDS Data through December 2014**

**Provided for the Ryan White  
HIV/AIDS Program, for  
Fiscal Year 2016**

This issue of the *HIV Surveillance Supplemental Report* is published by the Division of HIV/AIDS Prevention, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, Centers for Disease Control and Prevention (CDC), Atlanta, Georgia, and the HIV/AIDS Bureau, Health Resources and Services Administration, U.S. Department of Health and Human Services, Rockville, Maryland.

The *HIV Surveillance Supplemental Report* is not copyrighted and may be used and copied without permission. Citation of the source is, however, appreciated.

5 Reported number of persons living with diagnosed HIV infection non-AIDS, infection ever classified as AIDS, and total, by area of residence, as of December 2014—emerging communities for the Ryan White HIV/AIDS Program	17

The Ryan White HIV/AIDS Program statute was first enacted into law in 1990 and was amended in 1996, 2000, 2006, and 2009. More information about the legislation and its history is available from the Health Resources and Services Administration (HRSA) HIV/AIDS Bureau (HAB) at <http://hab.hrsa.gov/about/hab/legislation.html>.

In the implementation of the Ryan White HIV/AIDS Program (RWHAP) Parts A and B, HRSA HAB and the Centers for Disease Control and Prevention (CDC) collaborate to ensure the appropriate HIV and AIDS surveillance data are used in determining eligibility and funding allocation amounts. In FY 2016, HRSA used total counts of persons living with diagnosed HIV infection non-AIDS and persons living with infection ever classified as AIDS to calculate funding allocation amounts for eligible jurisdictions. Prior to FY 2007, only AIDS cases, adjusted by survival rate (estimated number of persons living with HIV infection ever classified as AIDS), were used in the formula. Beginning in FY 2007, persons living with diagnosed HIV infection non-AIDS as well as persons living with infection ever classified as AIDS, as reported to and confirmed by the Director of CDC, were used to calculate funding allocation amounts. See Technical Notes for further explanation.

The number of persons living with diagnosed HIV infection non-AIDS and the number of persons living with infection ever classified as AIDS are used to determine funding levels for Ryan White HIV/AIDS Program Parts A and B. For FY 2016, CDC provided HRSA with data files containing the total number of persons reported living with diagnosed HIV infection non-AIDS and the total number of persons living with infection ever classified as AIDS through calendar year 2014 for all jurisdictions. The number of persons living with diagnosed HIV infection non-AIDS and the number of persons living with infection ever classified as AIDS were added together to arrive at the total number of persons living with diagnosed HIV infection non-AIDS and infection ever classified as AIDS for each eligible area: eligible metropolitan area (EMA), transitional grant area (TGA), emerging community (EC), state, and territory. These totals

were used in the RWHAP Parts A and B funding formula calculations.

From FY 2007 through FY 2012, HRSA was required to accept code-based or non-name HIV non-AIDS data from jurisdictions without mature name-based data. Since FY 2013, RWHAP Parts A and B funding amounts have been based on name-based HIV reporting for both the total number of persons living with diagnosed HIV infection non-AIDS and the total number of persons living with infection ever classified as AIDS across all jurisdictions.

## RWHAP PART A FUNDING

For the RWHAP Part A funding formula, HRSA continues to use cumulative cases of AIDS reported to and confirmed by the Director of CDC for the most recent 5 calendar years for which such data are available to determine eligibility, as instructed by the RWHAP statute. RWHAP Part A has 2 categories of grantees: EMAs and TGAs. EMAs are defined as jurisdictions that have a cumulative total of 2,000 or more AIDS cases reported to and confirmed by the Director of CDC during the most recent 5 calendar years for which such data are available and a minimum population of 50,000 persons (prior to FY 2007, the minimum population threshold for inclusion as an EMA was 500,000). An area will continue to be an EMA unless it fails to meet both of the following requirements for 3 consecutive fiscal years: (a) a cumulative total of 2,000 or more cases of AIDS reported to and confirmed by the Director of CDC during the most recent period of 5 calendar years for which such data are available, and (b) a cumulative total of 3,000 or more persons living with HIV infection ever classified as AIDS reported to and confirmed by the Director of CDC as of December 31 of the most recent calendar year for which such data are available. In FY 2016, there were 24 EMAs.

The other category of Part A grantees, TGAs, are defined as those jurisdictions that have a cumulative total of at least 1,000 but fewer than 2,000 AIDS cases reported to and confirmed by the Director of CDC during the most recent 5 calendar years for which such data are available and a minimum population of

50,000 persons. An area will remain a TGA unless it fails to meet both of the following requirements for 3 consecutive fiscal years: (a) a cumulative total of at least 1,000 but fewer than 2,000 cases of AIDS reported to and confirmed by the Director of CDC during the most recent period of 5 calendar years for which such data are available, and (b) a cumulative total of 1,500 or more persons living with HIV infection ever classified as AIDS reported to and confirmed by the Director of CDC as of December 31 of the most recent calendar year for which such data are available. Provisions in the RWHAP statute provided for a modification beginning in FY 2009: in the case where a metropolitan area has a cumulative total of at least 1,400 but fewer than 1,500 persons living with HIV infection ever classified as AIDS as of December 31 of the most recent calendar year for which such data are available, such area shall be treated as having met criterion (b) as long as the area did not have more than 5% of the TGA grant award unobligated at the end of the most recent fiscal year. Areas that have fallen below either or both of the required TGA thresholds, but that continue to be eligible per the RWHAP statute because they must fail both criteria for 3 consecutive years, remain designated as TGAs and are presented in the TGA tables. For FY 2016, there were 28 TGAs.

The geographic boundaries for all jurisdictions that received Part A funding in FY 2016—both EMAs and TGAs—are those metropolitan statistical area (MSA) boundaries determined by the Office of Management and Budget (OMB) for use in federal statistical activities that were in effect when they were initially funded under Part A [1–3].\* For all newly eligible areas, of which there were none in FY 2016, the boundaries are based on current MSA boundary definitions determined by OMB [1–3].

Minority AIDS Initiative (MAI) formula funds for Part A are awarded based on the reported number of minority persons living with diagnosed HIV infection non-AIDS and infection ever classified as AIDS reported through the end of the most recent calendar

---

\*In FY 2015, 1 additional TGA received funding using boundaries that were different than those that were in effect when that jurisdiction first received funding. The decision to change the boundaries for this particular TGA was the result of litigation that has since been resolved in HRSA's favor. HRSA has consistently maintained that the geographic boundaries are those that are determined by OMB, and that such boundaries must remain fixed in time.

year as confirmed by the Director of CDC. Data for MAI formula funds are not included in this report.

## **RWHAP PART B FUNDING**

RWHAP Part B and AIDS Drug Assistance Program (ADAP) funds are awarded via 3 separate grant award processes: the RWHAP Part B Program formula award, the RWHAP Part B Supplemental award, and the RWHAP Part B ADAP Emergency Relief Fund (ERF) award. Each award is applied for and awarded separately. Funding is determined through formula and through demonstrated need, depending on the RWHAP Part B grant, as described below. The primary RWHAP Part B Program formula award includes several components: the RWHAP Part B Base award, the ADAP Base award, the MAI award (for those states that are eligible), the EC award (for those states that are eligible), and the ADAP Supplemental award (for those states that HRSA deems eligible and that choose to apply). The Part B Supplemental grant is a competitive award for states that demonstrate the need for additional Part B funds. The ADAP Emergency Relief Funds are competitive awards to help states prevent, reduce, or eliminate ADAP waiting lists and/or to implement ADAP-related cost-containment measures.

### **Part B Formula and Supplemental Grants**

RWHAP Part B Base, ADAP Base, and EC funds are distributed using a funding formula process; the awards are based on the reported number of persons living with diagnosed HIV infection non-AIDS and infection ever classified as AIDS in the state or territory through the end of the most recent calendar year as confirmed by the Director of CDC. The RWHAP Part B Base formula is a weighted relative distribution that also takes into account RWHAP Part A funding. Similarly, for grantees applying for MAI formula funds, awards are based on the reported number of minority persons living with diagnosed HIV infection non-AIDS and infection ever classified as AIDS reported through the end of the most recent calendar year as confirmed by the Director of CDC. Data for MAI formula funds are not included in this report. Supplemental ADAP grants are awarded by the same formula as ADAP Base to states that meet any of the criteria listed in that section of the Funding Opportunity Announcement for the purpose of providing medications or insurance assistance for persons living with HIV/AIDS.

RWHAP Part B Supplemental, ADAP Supplemental, and ADAP ERF grants are awarded to states demonstrating the severity of the burden of HIV infection and the need for additional federal assistance. The funds are intended to supplement the services otherwise provided by the state. The applications are reviewed through a federally approved technical review process. States and territories applying for supplemental funds must provide quantifiable data on HIV epidemiology, comorbidities, cost of care, the service needs of emerging populations, unmet need for core medical services, and unique service delivery challenges.

RWHAP Part B EC eligibility is also determined based on the number of persons living with HIV infection ever classified as AIDS in that jurisdiction. ECs are defined as metropolitan areas for which there have been at least 500 but fewer than 1,000 AIDS cases reported to and confirmed by the Director of CDC during the most recent 5 calendar years for which such data are available. An area will remain an EC unless it fails to meet both of the following requirements for 3 consecutive fiscal years: (a) a cumulative total of at least 500 but fewer than 1,000 cases of AIDS reported to and confirmed by the Director of CDC during the most recent period of 5 calendar years for which such data are available, and (b) a cumulative total of 750 or more persons living with HIV infection ever classified as AIDS reported to and confirmed by the Director of CDC as of December 31 of the most recent year for which such data are available. As with EMAs and TGAs, the geographic boundaries for ECs are those that were determined by OMB and that were in effect when initially funded.

# Technical Notes

---

In October 2009, Congress enacted amendments to the Ryan White HIV/AIDS Program (RWHAP) statute. The Act specifies the use of surveillance data on persons living with diagnosed HIV infection non-AIDS and infection ever classified as AIDS to determine formula funding for RWHAP Parts A and B HIV care and services programs. The RWHAP authorizes the Centers for Disease Control and Prevention (CDC) to provide AIDS data to the Health Resources and Services Administration (HRSA) for use in their funding formula for all jurisdictions and provide HIV non-AIDS case data for areas with accurate and reliable name-based reporting as specified in the Act. The Act provided that areas without name-based HIV reporting systems in place could report HIV non-AIDS data directly to HRSA until FY 2012. Beginning in FY 2013, determinations were to be based on HIV non-AIDS and AIDS data reported by CDC to HRSA for all jurisdictions.

As of December 2014, the Marshall Islands and the Federated States of Micronesia had not implemented name-based or code-based reporting systems. CDC is currently not accepting HIV case data from the Marshall Islands and the Federated States of Micronesia as their surveillance systems have not yet been certified. However, in the event that another jurisdiction reported cases that were diagnosed in either the Marshall Islands or the Federated States of Micronesia, the cases would be reflected in the data that CDC sends to HRSA annually.

## DATA REQUIREMENTS AND DEFINITIONS

Case counts in all tables are presented by residence at earliest HIV diagnosis for persons with diagnosed HIV infection non-AIDS and residence at earliest AIDS diagnosis for persons with infection ever classified as AIDS. Data are presented by date of report rather than date of diagnosis (e.g., persons reported as alive as of December 31, 2014). Boundaries for eligible metropolitan areas (EMAs) and transitional grant areas (TGAs) that became eligible prior to FY 2007 are based on the Office of Management and Budget (OMB) metropolitan statistical area (MSA) delineations that were in effect for such areas for FY 1994

(additional information on historical delineations is available at <http://www.census.gov/population/metro/data/pastmetro.html>). Boundaries for EMAs, TGAs, and emerging communities (ECs) that became eligible after 2006 are determined using applicable OMB definitions based on the year of first eligibility.

Reported persons living with diagnosed HIV infection non-AIDS or infection ever classified as AIDS and 5-year AIDS case counts are not adjusted for delays in reporting of cases or deaths. Reported persons living with diagnosed HIV infection non-AIDS or infection ever classified as AIDS are defined as persons reported as “alive” at last update.

HIV non-AIDS cases and AIDS case data reported from CDC met the CDC surveillance case definitions published in the 2008 revised surveillance case definitions for HIV infection among adults, adolescents, and children <18 months and for HIV infection and AIDS among children aged 18 months to <13 years [4].
