Pediatric HIV Surveillance
Diagnoses of HIV Infection among Children Aged <13 Years, by Age at Diagnosis, 2010–2014—United States and 6 Dependent Areas

N = 1,050

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.
Diagnoses of HIV Infection among Children Aged <13 Years, by Race/Ethnicity, 2010–2014—United States and 6 Dependent Areas

N = 1,050

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.

a Hispanics/Latinos can be of any race.
Diagnoses of HIV Infection and Population in Children Aged <13 Years by Race/Ethnicity, 2015—United States

- **American Indian/Alaska Native**: 1% population, 2% diagnoses
- **Asian**: 5% population, 6% diagnoses
- **Black/African American**: 14% population, 25% diagnoses
- **Hispanic/Latino**: 10% population, 25% diagnoses
- **Native Hawaiian/Other Pacific Islander**: <1% population, <1% diagnoses
- **White**: 15% population, 51% diagnoses
- **Multiple races**: 4% population, 4% diagnoses

**Note**: Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Data for the year 2015 are preliminary and based on 6 months reporting delay.

*Hispanics/Latinos can be of any race.*

Year of classification

Classifications, No

Aged <13 years

Aged ≥13 years
Percentages of Stage 3 (AIDS) Classifications among Children Aged <13 Years with Diagnosed HIV Infection, by Race/Ethnicity and Year of Classification, 1985–2014—United States and 6 Dependent Areas

*Hispanics/Latinos can be of any race.
Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.

Data are based on address of residence as of December 31, 2014 (i.e., most recent known address).
Persons Living with Diagnosed Perinatally Acquired HIV Infection Ever Classified as Stage 3 (AIDS), Year-end 2014—United States and 6 Dependent Areas

N = 5,581

Note. Data are based on address of residence as of December 31, 2014 (i.e., most recent known address).
Age Distribution of Persons Living with Diagnosed Perinatally Acquired HIV Infection, Year-end 2014—United States and 6 Dependent Areas

N = 11,761

Note: Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.
Rates of Females Aged 15–44 Years Living with Diagnosed HIV Infection, by Area of Residence, 2014—United States and Puerto Rico

N = 97,699  Total Rate: 152.4

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.
Diagnoses of Perinatally Acquired HIV Infection among Children Born During 2013, by Area of Residence—United States and Puerto Rico

N = 42

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.
Diagnoses of Perinatally Acquired HIV Infection among Children, Birth Years 2009–2013, by Area of Residence—United States and Puerto Rico

N = 454

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. Data for children residing in, but born outside of, the United States and Puerto Rico are included.
Diagnoses of Perinatally Acquired HIV Infection among Children Born in the United States and Puerto Rico, Birth Years 2009–2013, by Area of Residence

N = 345

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.

**Infected Infants**
- Before pregnancy: 38%
- During pregnancy: 18%
- At birth: <1%
- After birth: 16%
- Unknown: 22%

**Exposed but not infected**
- Before pregnancy: 75%
- During pregnancy: 22%
- At birth: <1%
- After birth: 1%
- Unknown: 1%

*Note.* Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.
