

HIV PREVENTION IN THE SOUTH:

Aligning CDC's Funding With Current HIV Trends

Since 2010, CDC has significantly reallocated its HIV prevention funding to better align it with the impact of HIV in each region. As a result, Southern states have received a substantial increase in funding, primarily through CDC's support to state and local health departments.

Core HIV prevention funding to the South*

*As defined by U.S. Census Bureau; includes Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia and West Virginia

"CDC is responding to the challenge of HIV in the South and nationwide by prioritizing the hardest-hit areas and populations and investing in the most effective strategies. These strategies include expanded testing for HIV, helping people living with HIV obtain ongoing care and treatment, and increasing awareness of and access to all effective prevention tools, including condoms, pre-exposure prophylaxis - or PrEP, and interventions to decrease risky behavior."

—Eugene McCray, M.D., director of CDC's Division of HIV/AIDS Prevention
