CDC awarded $10.04M to health departments and community-based organizations in Arizona for HIV prevention and care activities, including $3.26M in Ending the HIV Epidemic (EHE) funding.

CDC collects and disseminates data on 6 key EHE indicators. Current data are available online at AtlasPlus and on HHS AHEAD for each jurisdiction.

**DIAGNOSE:** Diagnose all people with HIV as early as possible

- **16%** of Arizonans with HIV are unaware of their status, which means they aren't getting the HIV care they need.
- **800** new HIV infections occurred in Arizona.
- **60,880** HIV tests were provided in Arizona with CDC funding. HIV testing enables people to know their HIV status.

**How CDC Dollars Can Improve DIAGNOSES:**
- Expand routine screening of people in health care settings
- Increase testing in non-traditional settings (e.g., jails, emergency departments, street-based services)
- Increase access to and use of HIV self-tests
- Integrate STI and viral hepatitis screening into HIV testing services
CDC offers technical assistance and HIV prevention trainings to build workforce capacity.

Nationally, learners from **216** unique organizations completed **565** HIV prevention courses with the most requested content area being increasing awareness of, access to, and adherence to PrEP.
