CDC awarded $4.64M to health departments and community-based organizations in Arkansas for HIV prevention and care activities, including $2.12M in Ending the HIV Epidemic (EHE) funding.

CDC collects and disseminates data on 6 key EHE indicators. Current data are available online at [AtlasPlus](#) and on [HHS AHEAD](#) for each jurisdiction.

### ARKANSAS

- **Arkansans** with HIV will face an average lifetime cost of $510,000 (2020 dollars).
- 18% of Arkansans with HIV are unaware of their status, which means they aren’t getting the HIV care they need.
- 330 new HIV infections occurred in Arkansas.
- 5,340 HIV tests were provided in Arkansas with CDC funding. HIV testing enables people to know their HIV status.

#### How CDC Dollars Can Improve DIAGNOSES:
- **Expand** routine screening of people in health care settings
- **Increase** testing in non-traditional settings (e.g., jails, emergency departments, street-based services)
- **Increase** access to and use of HIV self-tests
- **Integrate** STI and viral hepatitis screening into HIV testing services
**PREVENT:** Prevent new HIV transmissions by using proven interventions, including pre-exposure prophylaxis (PrEP) and syringe services programs (SSPs)

PrEP is medicine people at risk for HIV take to prevent getting HIV from sex or injection drug use.

5,130 Arkansans at high risk for HIV could potentially benefit from PrEP but only 731 were prescribed PrEP.

How CDC Dollars Can Improve PREVENTION:

- **Increase** access to and awareness of PrEP through innovations such as TelePrEP, a critical prevention tool in the context of COVID-19
- **Expand** access to SSPs and their capacity to provide integrated prevention services including PrEP
- **Implement** a status neutral approach to HIV prevention

**TREAT:** Treat people with HIV rapidly and effectively to reach sustained viral suppression

There are 7,200 people with HIV in Arkansas. Linking people with HIV to care within one month is a critical step to providing rapid access to HIV medicines.

48% of Arkansans with diagnosed HIV are virally suppressed.

When a person with HIV takes their medicine regularly, they become virally suppressed, allowing them to live a long and healthy life and have effectively no risk of sexually transmitting HIV.

How CDC Dollars Can Improve TREATMENT:

- **Expand** access to telemedicine
- **Develop** networks to rapidly link persons with recently diagnosed HIV to care services
- **Integrate** HIV, STI, and hepatitis treatment to holistically address the syndemic

**RESPOND:** Respond early to potential HIV clusters or outbreaks to get prevention and treatment services to people who need them

86 Rapidly growing clusters nationally

Cutting-edge public health approaches turn HIV data into action by identifying areas with rapid transmission and expanding resources to maximize prevention and treatment efforts.

How CDC Dollars Can Improve RESPONSE:

- **Direct** prevention and treatment resources to priority populations
- **Promote** equity in health services
- **Build** a competent workforce to address response activities

What CDC Dollars Can Build Workforce Capacity

CDC is providing funds to build a competent HIV prevention workforce that is representative of the communities they serve.

Nationally, learners from 216 unique organizations completed 565 HIV prevention courses with the most requested content area being increasing awareness of, access to, and adherence to PrEP.
