

HIV PREVENTION FLORIDA

People with HIV⁺

Annual HIV Incidence

% Unaware They Have HIV⁺

126,400

4,300

new infections

13%

When a person with HIV takes their medicine regularly they become virally suppressed and have effectively no risk of transmitting HIV. **66% of Floridians** with HIV are virally suppressed; the national goal is 80%.

Incidence is the estimated number of people **newly infected with HIV** in a given time period, whether or not they have been diagnosed.

87% of Floridians with HIV are aware of their status, which means many Floridians with HIV **aren't getting the care they need**. The national goal for the percentage of people with HIV who know their status is 90%.

Floridians with HIV will face an average **lifetime cost of \$501,000** to treat their infection (2019 dollars)

Pre-exposure prophylaxis (PrEP) is a pill for those at high risk for HIV.

122,502

Floridians at high risk for HIV could potentially benefit from PrEP

Taken daily, it can **block HIV**

13,623 Floridians were prescribed PrEP in 2018

*2018 data.

CDC awarded **\$43.5M^{††}** to Florida health departments and community-based organizations for HIV prevention activities, including:

HIV Testing

HIV Diagnosis

Linkage to Care

332,649 HIV tests^{†††} were provided in Florida

CDC-funded HIV testing ensures people at risk know their HIV status. Awareness of HIV status allows people who are HIV-negative to choose prevention activities to avoid infection.

of those

1,332 Floridians^{†††} were newly diagnosed with HIV through CDC-funded HIV testing

CDC-funded HIV testing makes people with HIV aware of their infection so they can take medicine to stay healthy and prevent transmission.

of those

1,010 Floridians^{†††} were linked to medical care within 90 days of HIV diagnosis

CDC-funded programs link people to medical care immediately after HIV diagnosis, so they can stay healthy and prevent transmission to others.

Due to end of year data submission dates, those who were diagnosed and successfully linked to care during the last two weeks of the year may have been excluded from this calculation.

Ending the HIV Epidemic: A Plan for America

The U.S. Department of Health and Human Services (HHS) has launched *Ending the HIV Epidemic: A Plan for America*. The initiative aims to **reduce new HIV infections in the U.S. by 90% by 2030**.

To End HIV:

Use the **right practices** in the **right places** with the **right people**

Diagnose

All people with HIV as early as possible

Treat

People with HIV rapidly and effectively to reach sustained viral suppression

Prevent

New HIV transmissions by using proven interventions, including pre-exposure prophylaxis (PrEP) and syringe services programs (SSPs)

Respond

Quickly to potential HIV outbreaks to get needed prevention and treatment services to people who need them

Dedicated people at all levels are working together to end HIV
