Nevada had the nation's 6th-highest rate of new HIV diagnoses in 2017.

When a person with HIV takes their medicine regularly they become virally suppressed and have effectively no risk of transmitting HIV. 60% of Americans with HIV are virally suppressed; the national goal is 80%.

When a person with HIV takes their medicine regularly they become virally suppressed and have effectively no risk of transmitting HIV. 60% of Americans with HIV are virally suppressed; the national goal is 80%.

82% of Nevadans with HIV are aware of their status, which means approximately 1,900 people in Nevada aren’t getting the care they need. The national goal for the percentage of people with HIV who know their status is 90%.

Nevadans with HIV will face an average lifetime cost of $478,000 to treat their infection (2017 dollars).

Pre-exposure prophylaxis (PrEP) is a pill for those at high risk for HIV.

9,710* Nevadans at high risk for HIV could potentially benefit from PrEP

765* Nevadans were prescribed PrEP in 2017

Taken daily, it can block HIV
CDC awarded $3.2M†† to Nevada health departments and community-based organizations for HIV prevention activities, including:

### HIV Testing

22,771 HIV tests†† were provided in Nevada.

CDC-funded HIV testing ensures people at risk know their HIV status. Awareness of HIV status allows people who are HIV-negative to choose prevention activities to avoid infection.

Due to end of year data submission dates, those who were diagnosed and successfully linked to care during the last two weeks of the year may have been excluded from this calculation.

### HIV Diagnosis

182 Nevadans†† were newly diagnosed with HIV through CDC-funded HIV testing.

CDC-funded HIV testing makes people with HIV aware of their infection so they can take medicine to stay healthy and prevent transmission.

### Linkage to Care

136 Nevadans†† were linked to medical care within 90 days of HIV diagnosis.

CDC-funded programs link people to medical care immediately after HIV diagnosis, so they can stay healthy and not transmit HIV to others.

### What Can Be Done?

Major developments in HIV science, prevention, and treatment have produced a once-in-a-generation opportunity to eliminate new HIV infections in the United States — including Nevada.

To End HIV:

Use the right practices in the right places targeted to the right people.

#### Diagnose

All people with HIV as early as possible after infection

#### Treat

All people with HIV rapidly so they can take HIV medicine to stay healthy and prevent transmission

#### Protect

People at risk for HIV with proven interventions, including medications that can prevent HIV

#### Respond

Rapidly to growing HIV networks and effectively respond to outbreaks of new HIV infections

Dedicated people at all levels working together to end HIV
