CDC awarded $79.45M to health departments and community-based organizations in New York for HIV prevention and care activities, including $8.77M in Ending the HIV Epidemic (EHE) funding.

CDC collects and disseminates data on 6 key EHE indicators. Current data are available online at AtlasPlus and on HHS AHEAD for each jurisdiction.

**NEW YORK**

New Yorkers with HIV will face an average lifetime cost of $510,000 to treat their infection (2020 dollars).

**DIAGNOSE:** Diagnose all people with HIV as early as possible

- 7% of New Yorkers with HIV are unaware of their status, which means they aren’t getting the HIV care they need.
- 1,800 new HIV infections occurred in New York.
- 116,606 HIV tests were provided in New York with CDC funding. HIV testing enables people to know their HIV status.

**How CDC Dollars Can Improve DIAGNOSES:**

- **Expand** routine screening of people in health care settings
- **Increase** testing in non-traditional settings (e.g., jails, emergency departments, street-based services)
- **Increase** access to and use of HIV self-tests
- **Integrate** STI and viral hepatitis screening into HIV testing services
**PREVENT: Prevent new HIV transmissions by using proven interventions, including pre-exposure prophylaxis (PrEP) and syringe services programs (SSPs)**

PrEP is medicine people at risk for HIV take to prevent getting HIV from sex or injection drug use.

- **72,640 New Yorkers** at high risk for HIV could potentially benefit from PrEP but only **34,321** were prescribed PrEP.

**How CDC Dollars Can Improve PREVENTION:**

- **Increase** access to and awareness of PrEP through innovations such as TelePrEP, a critical prevention tool in the context of COVID-19
- **Expand** access to SSPs and their capacity to provide integrated prevention services including PrEP
- **Implement** a status neutral approach to HIV prevention

**TREAT: Treat people with HIV rapidly and effectively to reach sustained viral suppression**

There are **133,900** people with HIV in New York. Linking people with HIV to care within one month is a critical step to providing rapid access to HIV medicines.

- **66% of New Yorkers** with diagnosed HIV are virally suppressed.
  
  When a person with HIV takes their medicine regularly, they become virally suppressed, allowing them to live a long and healthy life and have effectively no risk of sexually transmitting HIV.

**How CDC Dollars Can Improve TREATMENT:**

- **Expand** access to telemedicine
- **Develop** networks to rapidly link persons with recently diagnosed HIV to care services
- **Integrate** HIV, STI, and hepatitis treatment to holistically address the syndemic

**RESPOND: Respond early to potential HIV clusters or outbreaks to get prevention and treatment services to people who need them**

- **86** Rapidly growing clusters nationally

- Cutting-edge public health approaches turn HIV data into action by identifying areas with rapid transmission and expanding resources to maximize prevention and treatment efforts.

**How CDC Dollars Can Improve RESPONSE:**

- **Direct** prevention and treatment resources to priority populations
- **Promote** equity in health services
- **Build** a competent workforce to address response activities

**How CDC Dollars Can Build Workforce Capacity**

- **CDC is providing funds to build a competent HIV prevention workforce that is representative of the communities they serve.**

- Nationally, learners from **216** unique organizations completed **565** HIV prevention courses with the most requested content area being increasing awareness of, access to, and adherence to PrEP.
