

HIV PREVENTION

PENNSYLVANIA

% Unaware of HIV infection[†]

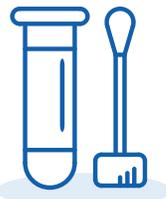

8%

92% of Pennsylvanians with HIV are aware of their status, which means approximately **3,000 people** in Pennsylvania **aren't getting the care they need.** The national goal for the percentage of people with HIV who know their status is 90%.

Annual HIV Diagnoses

1,094
new cases

23rd Highest

Pennsylvania had the nation's **23rd-highest rate of new HIV diagnoses** in 2017.

People with HIV[†]

36,800

When a person with HIV takes their medicine regularly they become virally suppressed and have effectively no risk of transmitting HIV. **60% of Americans** with HIV **are virally suppressed;** the national goal is 80%.

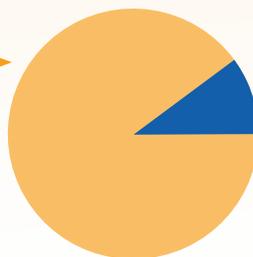

Pennsylvanians with HIV will face an average **lifetime cost of \$478,000** to treat their infection (2017 dollars)

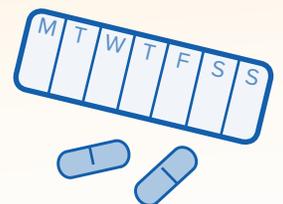

Pre-exposure prophylaxis (PrEP) is a pill for those at high risk for HIV.

36,050*

Pennsylvanians at high risk for HIV could potentially benefit from PrEP

Taken daily, it can **block HIV**

3,809* Pennsylvanians were prescribed PrEP in 2017

*AIDSvu (www.aidsvu.org). Emory University, Rollins School of Public Health. †2015 data.

CDC awarded **\$20.3M^{††}** to Pennsylvania health departments and community-based organizations for HIV prevention activities, including:

HIV Testing

143,420 HIV tests^{†††} were provided in Pennsylvania

CDC-funded HIV testing ensures people at risk know their HIV status. Awareness of HIV status allows people who are HIV-negative to choose prevention activities to avoid infection.

HIV Diagnosis

391 Pennsylvanians^{†††} were newly diagnosed with HIV through CDC-funded HIV testing

CDC-funded HIV testing makes people with HIV aware of their infection so they can take medicine to stay healthy and prevent transmission.

Linkage to Care

299 Pennsylvanians^{†††} were linked to medical care within 90 days of HIV diagnosis

CDC-funded programs link people to medical care immediately after HIV diagnosis, so they can stay healthy and not transmit HIV to others.

Due to end of year data submission dates, those who were diagnosed and successfully linked to care during the last two weeks of the year may have been excluded from this calculation.

What Can Be Done?

Major developments in HIV science, prevention, and treatment have produced a **once-in-a-generation opportunity to eliminate new HIV infections** in the United States — *including Pennsylvania.*

To End HIV:

Use the **right practices** in the **right places** targeted to the **right people**

Diagnose

All people with HIV as early as possible

Treat

People with HIV rapidly and effectively to reach sustained viral suppression

Prevent

New HIV transmissions by using proven interventions, including pre-exposure prophylaxis (PrEP) and syringe services programs (SSPs)

Respond

Quickly to potential HIV outbreaks to get needed prevention and treatment services to people who need them

Dedicated people at all levels working together to end HIV
