

HIV PREVENTION

SOUTH CAROLINA

% Unaware of HIV infection[†]

16%

84% of South Carolinians with HIV are aware of their status, which means approximately **3,100 people** in South Carolina **aren't getting the care they need**. The national goal for the percentage of people with HIV who know their status is 90%.

Annual HIV Diagnoses

718

new cases

8th Highest

South Carolina had the nation's **8th-highest rate of new HIV diagnoses** in 2017.

People with HIV[†]

19,200

When a person with HIV takes their medicine regularly they become virally suppressed and have effectively no risk of transmitting HIV. **62% of South Carolinians** with HIV are **virally suppressed**; the national goal is 80%.

South Carolinians with HIV will face an average **lifetime cost of \$478,000** to treat their infection (2017 dollars)

Pre-exposure prophylaxis (PrEP) is a pill for those at high risk for HIV.

9,040*

South Carolinians at high risk for HIV could potentially benefit from PrEP

Taken daily, it can **block HIV**

590* South Carolinians were prescribed PrEP in 2017

*AIDSvu (www.aidsvu.org). Emory University, Rollins School of Public Health. [†]2015 data.

CDC awarded **\$6.8M^{††}** to South Carolina health departments and community-based organizations for HIV prevention activities, including:

HIV Testing 

HIV Diagnosis 

Linkage to Care 

59,165 HIV tests^{†††} were provided in South Carolina

CDC-funded HIV testing ensures people at risk know their HIV status. Awareness of HIV status allows people who are HIV-negative to choose prevention activities to avoid infection.

of those

286 South Carolinians^{†††} were newly diagnosed with HIV through CDC-funded HIV testing

CDC-funded HIV testing makes people with HIV aware of their infection so they can take medicine to stay healthy and prevent transmission.

of those

226 South Carolinians^{†††} were linked to medical care within 90 days of HIV diagnosis

CDC-funded programs link people to medical care immediately after HIV diagnosis, so they can stay healthy and not transmit HIV to others.

Due to end of year data submission dates, those who were diagnosed and successfully linked to care during the last two weeks of the year may have been excluded from this calculation.

What Can Be Done?

Major developments in HIV science, prevention, and treatment have produced a **once-in-a-generation opportunity to eliminate new HIV infections** in the United States — *including South Carolina.*

To End HIV:

Use the **right practices** in the **right places** targeted to the **right people**

Diagnose	Treat	Protect	Respond
All people with HIV as early as possible after infection	All people with HIV rapidly so they can take HIV medicine to stay healthy and prevent transmission	People at risk for HIV with proven interventions, including medications that can prevent HIV	Rapidly to growing HIV networks and effectively respond to outbreaks of new HIV infections
			

Dedicated people at all levels working together to end HIV
