Cervical cancer is the only type of HPV cancer for which there is a recommended screening test.

Screening won’t protect your patients from most HPV cancers. Protect them now with HPV vaccination.

Cervical Precancers

While cervical precancers are routinely screened for, these precancers may require invasive testing and treatment.

Other HPV Cancers

Recommended cancer screening tests are not available yet for these cancers. These cancers may not be detected until they cause health problems.

HPV VACCINE IS CANCER PREVENTION

Cervical Cancer

Just the tip of the iceberg.

Even with screening, HPV causes 10,800 cases of cervical cancer each year in the U.S.
