Screening won’t protect your patients from most HPV cancers. Protect your preteen patients today with HPV vaccination.

Cervical Cancer
Just the tip of the iceberg.

Even with screening, HPV causes
10,800 cases of cervical cancer each year in the U.S.

Cervical Precancers
While cervical precancers are routinely screened for, these precancers may require invasive testing and treatment.

Other HPV Cancers

Cases Every Year

- Penile Cancer: 800 cases
- Vulvar & Vaginal Cancer: 3,300 cases
- Anal Cancer: 5,900 cases
- Oropharyngeal Cancer: 12,900 cases

Recommended cancer screening tests are not available yet for these cancers. These cancers may not be detected until they cause health problems.

Recommended HPV cancers are preventable through HPV vaccination.

Last updated AUGUST 2018.

OVER 90%
of HPV cancers are preventable through vaccination.
