

The Office of Island Affairs

Our Mission

OIA supports island health officials and their workforce to strengthen public health systems and improve community health outcomes in the US territories and freely associated states (T/FAS).

Public health issues affect these islands harder than most places because of their geographic location and limited local capacity. The remoteness, climate change vulnerabilities, and limited local resources available heighten the public health challenges experienced in the T/FAS. Recognizing their unique historical, sociodemographic, and cultural dynamics, CDC established OIA to support public health agencies that serve US citizens, noncitizens, and nationals residing on these islands.

Headquartered in Atlanta, Georgia, OIA also has personnel in American Samoa, Guam, Puerto Rico, and the US Virgin Islands.

OIA works toward strengthening the public health system by coordinating capacity-building assistance to strengthen the quality, performance, and sustainability of the public health systems in the T/FAS. OIA also works closely with CDC, non-government organizations, and federal partners to leverage and guide funded projects that improve public health business services; develop and train the workforce; and improve data and information systems, public health practice and services, partnerships, laws and policies, and resources.

OIA also helps further public health initiatives in the T/FAS by supporting response activities during public health emergencies, such as natural disasters and disease outbreaks.

Our Role

OIA works closely with the five US territories (American Samoa, Commonwealth of the Northern Mariana Islands, Guam, Puerto Rico, and the US Virgin Islands) and three freely associated states (Federated States of Micronesia, Palau, and the Republic of the Marshall Islands), connecting them to CDC programs, funding, and resources to strengthen their public health systems and improve community health.

Highlights of Our Work

- Facilitate consultations between senior island public health officials, key staff, CDC senior leaders, federal partners, and others to identify priority [public health issues](#) and barriers to addressing them.
- Support training needs including leveraging non-government organizations, CDC, and federal partners to provide training to island officials on public health issues, such as environmental health, suicide prevention, emergency response and preparedness, business processes, and provide tools and resources such as the [Grants Management Academy](#).
- Leverage CDC expertise in performance improvement, health equity, and public health systems.
- Connect multilaterally with the [US territories and freely associated states](#), federal agencies, and national and international stakeholders through regular communications, such as [OIA's bulletins](#).
- Partner with the [Pacific Island Health Officers Association](#) to offer the [Pacific Public Health Fellowship Program](#), which gives early-career professionals in the US-Affiliated Pacific Islands practical public health experience at a public health agency to help build a strong public health workforce.
