

# CUSTOMIZED INFOGRAPHIC

## PURPOSE

The perinatal infographic comes with a blank space to help community organizations and public health departments customize this document with local information, such as organization name, contact information, addresses and times of any upcoming events. Below are directions to customizing your own infographic!

## HOW TO GUIDE

1. Download the [customizable version of the infographic](#) and the accompanying [template for logo and organization information](#).
2. Open the file titled "Logo + Org Info PDF Template"
  - a. Enter local information-your organization name, address, phone number, logo etc.
  - b. Save the file as a PDF to your computer
3. Open the infographic titled "Perinatal Infographic-Customizable Version"
  - a. Click in the middle of the white space on the second page, below the last infographic section and above the bar with logos
  - b. In the pop-up box, browse for the saved template file and select it. Note, the format only searches for PDF files, so if the template file does not appear, make sure it was saved as a PDF
4. All done! The infographic should be filled out with the information of your organization's contact details! For a sample, see below. If you have additional questions, contact [schen1@cdc.gov](mailto:schen1@cdc.gov) for help.

**VACCINATE YOUR BABY AGAINST HEPATITIS B**  
**IT COULD SAVE YOUR BABY'S LIFE.**

**WHAT IS HEPATITIS B?**

**HEPATITIS B** is a serious liver disease caused by the **HEPATITIS B VIRUS**.

**HEPATITIS B OFTEN DOESN'T CAUSE SYMPTOMS.** Many people can live with hepatitis B for years without feeling sick.

**1 IN 4** people living with hepatitis B can develop serious liver problems, including **LIVER CANCER**.

**DID YOU KNOW?**

- All pregnant women are routinely tested for hepatitis B.
- People who find out they have hepatitis B can take steps to keep their baby and family protected.
- The **HEPATITIS B VACCINE** is the 1st cancer prevention vaccine.

**HOW IS HEPATITIS B SPREAD?**

- Hepatitis B is spread through contact with blood. An infected family member or caregiver can pass the virus to an infant.
- A pregnant woman who has hepatitis B can pass the virus to her infant at birth, but the vaccine can help prevent the baby from getting infected.
- Most people living with hepatitis B get infected as infants or young children when their immune systems were not fully developed.

**WHY SHOULD MY BABY BE VACCINATED AGAINST HEPATITIS B?**

- The hepatitis B vaccine can prevent a baby from getting infected. CDC recommends all babies get the first hepatitis B vaccine shot at birth and follow the vaccine schedule to get the remaining shots.
- The hepatitis B vaccine is safe and effective.
- Delaying the first dose of the hepatitis B vaccine can put your baby at risk for hepatitis B.
- The hepatitis B vaccine has helped prevent millions of infants from getting hepatitis B, which can be a deadly disease.
