

A Lesson on Hepatitis B That Could Save Your Life

CDC recommends Asian Americans get tested for Hepatitis B

Hepatitis B is spread through direct contact with infected blood.

Most people were infected at birth or in early childhood.

Hepatitis B is the leading cause of liver cancer for Asian Americans.

Sharing food or utensils will not spread the Hepatitis B virus. It does not spread through air.

Ask your doctor about getting tested for Hepatitis B. Treatments are available that can save your life.
