

## **General Health Questionnaire (GHQ)**

### **Description**

GHQ-30 is a self-report screening instrument to detect current, diagnosable psychiatric disorders. It includes especially an assessment of the inability to carry out one's normal health functions and the appearance of new phenomena of a distressing nature. This data set includes two GHQ scores, the GHQ score and the corrected GHQ score

Refer to the data codebook for the detailed information of each variable.

### **Study Sample**

224 participants

### **Data Collection Methods**

GHQ was administered by paper-and-pencil on the first clinic evaluation day. The scores were derived from the raw responses later.
