**Gynecological History**

**Description**

This dataset contains information on gynecologic history, such as menstrual periods, menopause, use of hormones, diagnosis of endometriosis, other gynecologic conditions, pelvic pain unrelated to menstrual period, number of pregnancies, removal of uterus or ovaries, other gynecologic surgeries.

**Participants**

All female participants (n = 186) in the study completed the gynecological history questionnaire.

**Data Collection Methods**

The gynecological history data collection was self-administered in paper-and-pencil format on the arrival day.
