

## Medication Usage

### **Description**

During the 2-day in-hospital study, participants brought all current prescribed and over-the-counter medications and dietary supplements to the hospital, and enumerated their medication use, including prescription, OTC medications, and supplements/vitamins. These were reviewed, catalogued by a study nurse and their use during the study was monitored.

### **Study Sample**

227 participants

### **Data Collection Method**

Medication history data collection was clinician-administered in paper-and-pencil format from arrival to departure. Details are available in [Vernon 2006]
