

Ways of Coping Questionnaire (WCQ)

Description

The version of *Ways of Coping* (WCQ) used in this study consists of 66 items, which contains a wide range of thoughts and acts that people use to deal with the internal and/or external demands of specific stressful encounters. [Folkman 1985] This data set includes eight WCQ subscale scores.

Refer to the data codebook for the detailed information of each variable.

Study Sample

223 participants

Data Collection Methods

WCQ was administered on the 2nd clinic evaluation day, and the scores were calculated from the raw responses later.
