

Cheryl Broussard is a health scientist in the Division of Birth Defects and Developmental Disabilities at the National Center on Birth Defects and Developmental Disabilities at the Centers for Disease Control and Prevention. She currently leads the Division's Treating for Two: Safe Medication Use in Pregnancy Initiative and chairs the medications workgroup for the multicenter National Birth Defects Prevention Study. Cheryl joined CDC in 2007 as an Epidemic Intelligence Service (EIS) officer, and she now coordinates EIS activities for the National Center on Birth Defects and Developmental Disabilities. Her current research includes studying patterns of medication use among women of childbearing age and evaluating the safety or risk of medications used during pregnancy, and she has recently served on expert committees related to use of chemotherapeutic agents and illicit use of opioid drugs during pregnancy. She received her PhD in epidemiology from the University of Texas (UT) School of Public Health at Houston and her MA in health education from UT-Austin.
