

Major disparities in adult cigarette smoking exist among and within racial and ethnic groups.

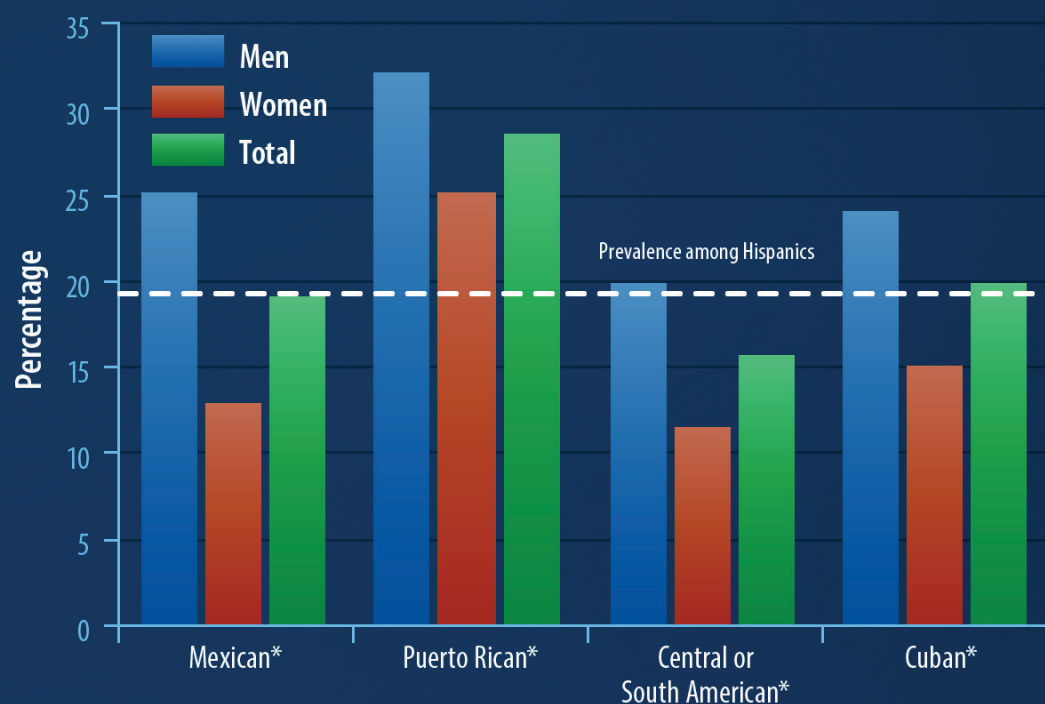

Past 30-day Cigarette Use among Persons 18 or Older, by Asian Sub-groups and Sex – National Survey on Drug Use and Health, United States 2010-2013

* Difference between estimates for men and women in the same racial/ethnic group is statistically significant at the 0.05 level.

§ Low precision (RSE > 17.5%); no estimate reported.

Past 30-day Cigarette Use among Persons 18 or Older, by Hispanic Sub-groups and Sex – National Survey on Drug Use and Health, United States 2010-2013

* Difference between estimates for men and women in the same racial/ethnic group is statistically significant at the 0.05 level.

High impact media campaigns, higher prices for tobacco products, coupled with evidence-based cessation services, smoke-free policies, and promotion of cessation treatment, if fully implemented and enforced, **can reduce tobacco use, particularly among racial and ethnic populations with the highest rates of use.**
