

Amy Wolkin, DrPH

Chief, Health Studies Branch,
National Center for Environmental Health

Amy Wolkin is the Chief of the Health Studies Branch in the National Center for Environmental Health, CDC. She previously served as the Lead of the Disaster Epidemiology and Response Team. Since coming to CDC in 2002, Dr. Wolkin has lead a number of domestic and international outbreak investigations, conducted epidemiologic research, and been involved in domestic and international emergency responses to provide epidemiologic expertise.

Her research experience includes studies on health impacts of extreme weather, disaster morbidity and mortality, community health assessments following disasters, and environmental contaminants and health effects. Dr. Wolkin has authored numerous peer-reviewed articles and book chapters on disasters, environmental health, and surveillance.

Dr. Wolkin received her Doctorate of Public Health from University of North Carolina's Gillings School of Global Public Health in 2014 and her Masters of Science in Public Health in Epidemiology and Environmental and Occupational Health from Emory University's Rollins School of Public Health.
