Every year in the U.S., 27,000 people get cancer caused by HPV. That’s 1 person every 20 minutes of every day, all year long. Most of these cancers can be prevented by HPV vaccine.

Preteens need three vaccines at 11 or 12. They protect against whooping cough, cancers caused by HPV, and meningitis.

Preteens have a higher immune response to HPV vaccine than older teens.

While there is very little risk of exposure to HPV before age 13, the risk of exposure increases thereafter.

Parents and healthcare professionals are the key to protecting adolescents from HPV cancers.

VACCINATE YOUR 11-12 YEAR OLDS.
