QuickStats

FROM THE NATIONAL CENTER FOR HEALTH STATISTICS

Percentage* of Children and Adolescents Aged ≤17 Years Whose Usual Place of Sick Care is a Clinic or Health Center,† by Race/Ethnicity§ and Metropolitan Status of Residence¶ — National Health Interview Survey, United States, 2014**

In 2014, children living in nonmetropolitan areas were most likely (34%) to have a clinic or health center as their usual place of sick care, followed by children in large metropolitan areas (30%) and children in small metropolitan areas (20%). This general pattern held for all three race and ethnicity groups. Hispanic children were more likely than non-Hispanic white and non-Hispanic black children to have a clinic or health center as their usual place of sick care in all household residence locations.
